

What is the Grazing Lands Conservation Initiative?

Through the Grazing Lands Conservation Initiative (GLCI), NRCS offers a variety of technical assistance to landowners and operators interested in grazing.

The development of a conservation plan for your entire agricultural operation can help you effectively deal with the challenges on your farm and assist you in taking advantage of new opportunities.

A prescribed grazing plan is a tool used to manage your livestock and forages to maximize productivity for long-term sustainable use.

How We Can Help

Access to good quality water is essential to an effective grazing system. NRCS can help you fence livestock out of surface water and wetlands, plant riparian buffers and install fencing and alternative livestock watering facilities for prescribed grazing.

An essential part of keeping pastures and livestock productive is managing your soil

fertility and forage quality.

NRCS assistance can include nutrient management, pest management

(including control of invasive species), pasture and hayland planting, composting and manure utilization.

Additional grazing and pasture management practices could include: animal trails and walkways, transition to organic production, heavy use area protection, feed management, manure storage facility, field border and riparian forest buffer.

NRCS also offers a variety of conservation practices to enhance upland and wetland wildlife habitat.

Financial Assistance

There's a great deal of funding available to New Hampshire producers through programs like the Environmental Quality Incentive Program (EQIP) and the Wildlife Habitat Incentive Program (WHIP).

You need to work with your local NRCS office to determine your eligibility and to find out specific details about programs and practices that will work on your farm.

Cost-Share Programs

NRCS cost-share programs are available to all farmers that meet basic eligibility requirements. This includes all landowners and operators:

- Who are engaged in crop or livestock production on eligible land (pasture, cropland, hayland, forested land, farmstead, etc.) may participate;

- Must own or control the land and agree to install and maintain specific eligible conservation practices;

- All grazing land applications are evaluated against each other to determine the environmental benefits of the proposed work. Funding is competitive statewide; and

- Applications with the greatest environmental benefits are funded first.

Granite State Graziers

The Granite State Graziers is the GLCI Steering Committee in New Hampshire. They exist **to strengthen the viability and sustainability of New Hampshire's farms through forage and grazing-based agriculture.**

The Granite State Graziers (GSG) are an advisory group of New Hampshire farmers that plan educational activities about grazing and pasture management.

For more information about GSG please call the NRCS State Office, 603-868-7581, and ask for the GLCI State Coordinator.

Benefits of Grazing Lands

- An available supply of food and fiber
- Clean air
- Healthy wildlife populations and habitat
- Improved fisheries and aquatic systems
- Healthy riparian areas
- Improved water quality and quantity
- Reduced potential for flooding
- Less sediment in streams and reservoirs
