1. Economic Evaluation

A National Economic Development (NED) benefit cost analysis (BCA) has been performed to evaluate the benefits of the proposed actions. The evaluation includes identification of the No Action economic damages; and estimation of the NED benefits of alternatives to the identified problems. The analysis uses federal water resource project and NRCS guidelines for the evaluation of NED benefits such as the NRCS Natural Resources Economics Handbook (NRCS 1988), and the National Watershed Program Manual (NRCS 2015).

The basic objective of the economic analysis is to determine whether or not benefits from proposed actions exceed project costs for federally funded projects. The Principles and Guidelines (P&G) also requires that the NED Alternative, which maximizes monetary net benefits, be selected for implementation unless there is an overriding reason for selecting another alternative based on federal, state, local, or international concerns related to the social and environmental accounts (P&G 1.10.2).

All economic damages, benefits and costs use the base fiscal year (FY) 2017 (October 2016). Benefits and costs have been discounted and converted to an average annual, following the FY 2017 federal interest rate of 2.875 percent (USACE 2017) over a 50-year period of analysis (U.S. Water Resources Council 1983).

The analysis is focused on the monetary and non-monetary effects when PL 83-566 authority is being utilized in lieu of the Salinity Control Program administered by the Bureau of Reclamation (Reclamation).

2. NED Analysis

The NED analysis compares benefits derived from a comparison of the Action Alternative against a base condition or No Action Alternative. The Action Alternative consists of several project components (increments) located within four separate subwatersheds of the Lower Gunnison Project. Some of the project components (conversion of irrigation ditches to pipes) are an acceleration of an on-going salinity control program carried out by Reclamation. The Action Alternative also includes additional enhancements through the implementation of SCADA systems, headgate control structures, and replacement of some failing or antiquated headgates to increase the efficiency of operations of the canals, ditches, and pipes.

a. No Action Alternative for the NED Analysis

Under the No Action Alternative for the NED analysis, Reclamation would install the pipelines in the subwatersheds under the Salinity Control Program administered by Reclamation. Since a definitive time frame is not known, the following assumptions are made for schedule of costs and benefits:

- Project benefits and costs are discounted to present value with the same period of analysis as the Action Alternative.
- Construction on all pipelines would begin in 15 years with a 2-year construction phase (years 15 and 16 of the period of analysis).
- Project benefits would accrue following 2 years of implementation (beginning in year 17 of the period of analysis) and extend for 33 years until the end of the period of analysis.

- All benefits and costs are evaluated at the subwatershed level.

It is important to note that if Reclamation were to install pipeline systems within year 1 or 2 (following the decision) then the No Action would look as these costs as sunk or non-recoverable and independent of future costs to the planning decision. The No Action would not include pipeline costs from the Reclamation works (including required cost-share) for those components.

For simplification of the analysis regarding costs for the No Action Alternative, installation of pipelines in the subwatersheds using funds from the Bureau of Reclamation are assumed to be equivalent to costs undertaken with PL 83-566 funds. In other words, the costs of the No Action Alternative piping projects are the same as those for the Action Alternative. The future costs of those actions will be discounted to reflect the costs of delaying those actions into the future.

b. Action Alternative for the NED Analysis

Under the NED analysis's Action Alternative, NRCS funding would result in the acceleration of the installation of pipe that could occur under the Salinity Control Program administered by Reclamation. The NRCS funding would also provide enhancements through the implementation of SCADA systems and new headgate control structures. Additionally, in accordance with accounting principles from the P&G, the cost of the No Action Alternative is treated as benefit to the Action Alternative (avoided future costs). The avoided future costs are included to account for all monetary effects (benefits and costs) between from the No Action and the Action Alternative.

The following assumptions are made for schedule of costs and benefits of the Action Alternative:

- Construction on all pipelines would begin in year 1 of the period of analysis with a 2-year construction phase (years 1 and 2 of the period of analysis).
- Project benefits would accrue following the 2 years of implementation (beginning in year 3 of the period of analysis) and extend for 48 years until the end of the period of analysis.
- All benefits and costs are evaluated at the subwatershed level.

3. NED Costs

Total cost estimates were provided by the project sponsor, the Colorado River Water Conservation District (River District). Project estimates from the respective subwatershed master plans were used to develop subcategory costs for each project component. Cost categories for pipeline implementation include: planning engineering and design, construction management, site restoration, mobilization, site restoration, and construction. Cost categories for SCADA and headgate systems include: design, planning engineering and design, contingency, and construction. The cost shares applied to the total cost estimates are shown below in **Table D-1**.

Table D-1. Estimates of Cost Shares used for the Lower Gunnison Watershed Project Analysis

Piping Projects			SCADA Projects	
Cost Category	Estimated Cost	Percent of Cost	Cost Category	Percent of Cost
Planning, Engineering, and Design (PED)	\$257,800	4%	Design	8%
Mobilization	\$160,000	2%	PED	8%
Construction	\$3,400,000	51%	Contingency	20%
Site Restoration	\$32,000	0%	Construction	64%
Construction Management (CM)	\$2,578,000	39%	-	-
Mitigation	\$180,200	3%	-	-
Total	\$6,608,000	100%	Total	100%

Table D-2 shows the projected construction costs associated with the various increments of the No Action and Action Alternatives.

Total		\$14,496,937	\$550,131	

4. NED Benefits

Economic benefits and impacts were calculated based on the expected effects of the Action Alternative and the specific project components. For the Lower Gunnison Project, the Action Alternative includes optimization techniques for irrigation water conveyance, piping of canals and laterals, and installation of SCADA systems and automated headgates. Conversion of the open, earthen canals or laterals to enclosed pipelines would reduce salinity, selenium, seepage losses and reduce existing operation and maintenance costs for the canal operators. Implementation of SCADA systems and automated headgates would reduce the need for frequent site visits for daily monitoring. Additionally, water savings from piping, SCADA systems, and automated headgates would benefit producers who are junior water rights holders by improving the management of upstream control of diversions and allowing operators to immediately respond to demands on the system as well as changing weather.

Finally, a cost avoidance benefit represents the Reclamation federal monies that would need to be allocated in order for the No Action Alternative to be implemented. All economic benefits calculated assumed that the improvements are expected to be fully developed by 2019. The following sections describe the development of these benefits categories.

a. Cost Avoidance Benefit

The cost avoidance benefit represents the federal monies that would need to be allocated in order for the No Action Alternative to be implemented. This benefit is summarized in the table below. **Table D-4** values, in accordance with accounting principles from the P&G, are the cost of the No Action Alternative. The avoided future costs are treated as benefit to the Action Alternative. The avoided future costs are included to account for all monetary effects (benefits and costs) from the No Action (Reclamation funding only) and the Action Alternative (pipeline is being installed sooner using the PL 83-566 authority by NRCS).

Table D-4. Estimated Average Annual Cost Avoidance Benefits. Lower Gunnison Project, Colorado (FY 2017 Dollars).

Subwatershed	Land Treatment	Average Annual Benefit
North Fork	Canal Piping Installation	\$116,996
Crawford	Canal Piping Installation	\$28,041
Uncompahgre	Canal Piping Installation	\$176,390
Bostwick Park	Canal Piping Installation	\$15,767
Total		\$337,193

b. Salinity Benefits

Salinity benefits are in the form of avoided economic damages resulting from downstream controls necessary to reduce salinity. These benefits would be realized through the conversion of canals to pipelines thereby reducing salinity loading. A value of \$271 per ton of salt saved was identified for the Colorado River Basin by Reclamation at the downstream dams (Parker and Imperial Reservoirs) based on modeling results from the Colorado River Basin Economic Salinity Damage Model (Reclamation, 2017).¹

Annual salinity reduction benefits in tons per year for each subwatershed are shown in **Table D-5**. The results of canal piping and replacement would reduce salinity by approximately 6,000 tons per year. Combining the salinity reduction savings associated with conversion of the canals to pipeline with the value of salt controls, \$271 per ton yields an average annual benefit of \$719,755 for the Lower Gunnison Project.

Table D-5. Estimated Average Annual Salinity Reduction Benefits. Lower Gunnison Project, Colorado (FY 2017 Dollars).

Subwatershed	Land Treatment	Median Salinity Reduction, Tons/yr*	No Action Average Annual Benefit	Proposed Action Average Annual Benefit	Average Annual Benefit (Difference of No Action and Action)
North Fork	Canal Piping Installation	2,804	\$388,224	\$726,790	\$338,566
Crawford	Canal Piping Installation	195	\$26,998	\$50,544	\$23,545
Uncompahgre	Canal Piping Installation	2,676	\$370,502	\$693,613	\$323,111
Bostwick Park	Canal Piping Installation	286	\$39,598	\$74,131	\$34,533
Total		5,961	\$825,322	\$1,545,077	\$719,755

*Data from Water Resources Section 5.2.1 of Watershed Plan-EA

c. O&M Savings

The canal operators have regular operation and maintenance (O&M) costs associated with maintaining the operability of the canals during the irrigation season. Maintenance items include cleaning and trash removal, spring burning, mowing, vegetation spraying, rodent control, and miscellaneous repairs. These costs include materials, labor, and equipment costs; as well as travel time to the canals and project management. These costs would be avoided with the conversion to pipelines.

Estimates of annual O&M costs were provided by the canal operators for North Fork for the Fire Mountain Canal Salinity Piping Project, Uncompahgre for the GB and GBA laterals which are a component of the Phase 9 piping project, and for Bostwick Park for the West Lateral Phase 1 area. O&M estimates were not provided for the Crawford subwatershed, so benefits from reduced O&M

¹ Estimated value is for avoided salinity controls in the lower Colorado River system at the Imperial and Parker Reservoirs. Unpublished value. (Reclamation pers. comm. 2017)

costs are not included for this subwatershed. Estimated benefits are shown in **Table D-6** for each subwatershed and land treatment.

Table D-6. Estimated Annual Avoided Operations and Maintenance Costs. Lower Gunnison Project, Colorado (FY 2017 Dollars).

Subwatershed	Land Treatment	Average Annual Benefit
North Fork	Fire Mountain Canal Salinity Piping Project	\$31,549
Crawford	Grandview-Aspen & Needle Rock Piping Projects	\$4,173
Uncompahgre	GB and GBA Laterals	\$1,391
Bostwick Park	West Lateral Phase 1 area	\$601
Total		\$37,713

d. SCADA

Implementation of SCADA systems would provide an operational savings to canal operators by reducing daily trips to monitoring sites. The River District provided an estimate of trips and travel time to and from proposed SCADA locations for the North Fork subwatershed. For the other canals, travel time reductions were extrapolated using the North Fork-provided information. Estimated SCADA benefits for the North Fork subwatershed are shown in **Table D-7**.

Table D-7. North Fork SCADA Benefits. Lower Gunnison Project, Colorado

SCADA Locations	Current Number Visits/ Day	Estimated Visits/ Day under SCADA	Number of Irrigation Days	Travel Time to each Site(s) (hours)	Current Hours to Travel to Monitor Sites	Hours to Travel to Monitor Sites with SCADA	Time Savings, Hours

Leroux Creek Feeder	4	1	170	0.5	680	170	510
Total (hours)					2,859	877	1,982
Average Hours per Location					572	175	396

To estimate the benefits of SCADA systems for the Crawford, Uncompahgre, and Bostwick Park subwatersheds, the average annual time savings per SCADA location (396 hours) from the North Fork subwatershed was used with an assumption that NRCS funding would provide benefit for three SCADA locations.

To estimate the value of time, USACE ER 1105-2-100 (Appendix D Amendment #1) Table D-4: *Value of Time Saved by Trip Length and Purpose* was referenced. For the value of time (VOT), all of the work-related trips shown were greater than 15 minutes in length, for a reference value of \$8.33 in 2006 dollars. This value was adjusted to FY 2017 using for a VOT of \$10.71.

The travel time information was combined with an hourly VOT to estimate the benefits of reduced cost of trips to proposed SCADA monitoring sites as shown in **Table D-8**. The total average annual benefit for reduced travel time for workers would be \$67,745.

Table D-8. Estimated Travel Time Savings Benefits for SCADA Monitoring Sites. Lower Gunnison Project, Colorado (FY 2017 Dollars).

Subwatershed	Land Treatment	Hours of Travel Time Saved	Average Annual Benefit
North Fork	Reduced Travel Costs - SCADA	1,982	\$24,195
Crawford	Reduced Travel Costs - SCADA	1,189	\$14,517
Uncompahgre	Reduced Travel Costs - SCADA	1,189	\$14,517
Bostwick Park	Reduced Travel Costs - SCADA	1,189	\$14,517
Total		4,360	\$67,745

e. Benefits to Producers

Irrigation is used to throughout the subwatersheds in the production of crops. Water savings from piping and SCADA systems would benefit producers who are junior water rights holders through prevention of delivery system seepage losses. Additional water could support production expansion in the watershed. This would be considered a net benefit to society. This benefit was evaluated using a comparison of the value that irrigation lends in the production of crops. Comparing the production of irrigated crops with non-irrigated crops in the region demonstrates the value of saving water and using it to expand crop production.

The benefits were estimated using acre-feet of water saved per year along with crop budgets and production data for irrigated and non-irrigated crops. Since all crops produced in the watershed are irrigated, this analysis is limited to a comparison between irrigated and non-irrigated corn in the region. Estimated benefits are shown in **Table D-9** for each subwatershed and land treatment.

Table D-9. Estimated Annual Producer Benefits. Lower Gunnison Project, Colorado (FY 2017 Dollars).

Subwatershed	Land Treatment	Average Annual Benefit
North Fork	Piping	\$8,772
	SCADA	\$6,352
Crawford	Piping	\$4,070
	SCADA	\$7,622
Uncompahgre	Piping	\$1,177
	SCADA	\$88,504
Bostwick Park	Piping	\$368
	SCADA	\$8,469
Total		\$125,335

f. Summary of Benefits

The summary of the estimated average annual NED benefits for the Lower Gunnison Watershed are presented in **Table D-10**. The Action Alternative would provide about \$1,288,000 in average annual benefits from avoided salinity loading, operations and maintenance savings, cost avoidance, producer benefits and reduced travel costs.

Table D-10. Estimated Average Annual NED Benefits. Lower Gunnison Project, Colorado (FY 2017 Dollars, 2.875% Discount Factor).

Subwatershed	Land Treatment	Benefit Category	Average Annual Benefit			
			Agriculture-Related	Nonagricultural-Related	Total	
North Fork	Piping	Avoided Salinity Reduction		\$338,566	\$338,566	
		O&M Savings - Piping		\$31,549	\$31,549

		Subtotal	\$8,469	\$14,517	\$22,986	
			Total Subwatershed	\$8,838	\$65,417	\$74,255
	Grand Total			\$125,335	\$1,162,407	\$1,287,742

In addition to the monetized benefits presented above, the project would likely have additional benefits which were not included in the analysis. These benefits include but are not necessarily limited to:

- Water Supply Resiliency Benefits
- Agriculture Intensification Benefits
- Energy and Emissions Savings
- Selenium Reduction Benefits

The project would help to make additional water supply available for the Lower Gunnison Watershed by eliminating delivery system seepage losses that could otherwise be made available in water-short areas. In addition, drought cycles occur periodically, 3 out of 10 years, where rains or snowmelt are not sufficient to provide optimal water to crops during critical times in the growing season. Under these lower yield years, irrigators in the upper end of the watershed would likely get sufficient water but those further down the line get less than sufficient water and the return runoff to the open ditch also would have greater salinity and sediment, which impacts irrigation efficiency. The new system would result in more water available and the lower end would have similar surety of water as the upper end.

With a greater volume of water available in the system (from avoided losses), it is also possible that agricultural producers could change land use to higher valued crops or higher water use crops.

Implementation of the pressurized system could reduce the need for pumps to lift water before application to fields. This energy savings would be a reduced cost to the farm operating budget. Additionally the reduction in energy use for pumps could have a broader environmental impact from avoided greenhouse gas emissions and criteria air contaminants.

The final benefit not monetized but important for consideration is the effect of reduced downstream selenium damages. There is a need to reduce selenium concentrations in the lower Uncompahgre and lower Gunnison Rivers to meet Colorado water-quality standards and to reduce potential selenium-related impacts to endangered native fish. As shown in **Table D-11**, use of NRCS funds would accelerate the implementation of the piping projects providing environmental benefits for fish much earlier, saving an additional 2,785 tons of selenium over the next 100 years.

Table D-11. Discounted Selenium Reduction Benefit (non-monetary)*

Subwatershed	Land Treatment	No Action (tons)	Action Alternative (tons)	Net Benefit (tons)
North Fork	Canal Piping Installation	309	528	219
Crawford	Canal Piping Installation	4	8	3
Uncompahgre	Canal Piping Installation	2,399	4,097	1,698
Bostwick Park	Canal Piping Installation	1,221	2,086	865
Total		3,934	6,719	2,785

* Data from Water Resources Section 5.2.1 of Watershed Plan-EA

5. Comparison of Costs and Benefits and the NED Plan

Table D-12 summarizes the average annual NED benefits and costs for the Action Alternative in the Lower Gunnison Watershed. As shown in the table below, all of the increments of the proposed project specific components are economically justified for funding with the PL 83-566 program.

**Table D-12. Comparison of NED Benefits and Costs. Lower Gunnison Project, Colorado
(FY 2017 Dollars, 2.875% Discount Factor)**

Subwatershed	Land Treatment	Total Damage Reduction Benefit, Average Annual	Total Average Annual Cost	NED Metrics	
				Benefit Cost Ratio	Net Benefits
North Fork	Piping	\$495,883	\$178,986	2.8	\$316,897
	SCADA	\$30,547	\$5,629	5.4	\$24,918
Crawford	Piping	\$59,829	\$42,898	1.4	\$16,931
	SCADA	\$22,139	\$3,859	5.7	\$18,280
Uncompahgre	Piping	\$502,069	\$269,850	1.9	\$232,219
	SCADA	\$103,021	\$12,075	8.5	\$90,946
Bostwick Park	Piping	\$51,269	\$24,120	2.1	\$27,148
	SCADA	\$22,986	\$5,028	4.6	\$17,958
Total		\$1,287,742	\$542,444	2.4	\$745,298

NED and Preferred Plans

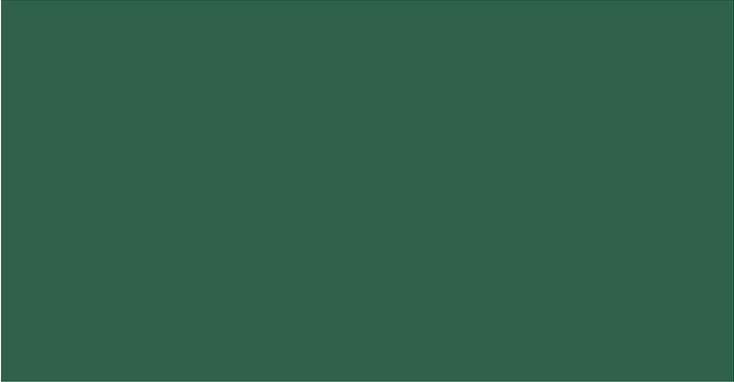

The P&G requires the identification of the NED plan for purposes of defining the federal interest for cost sharing purposes. Selection of a non-NED plan as the preferred action alternative would require an exception (P&G 1.10.2 and NRCS 2015 502.0). The P&G states that the NED plan is the federally assisted alternative with the greatest net economic benefits. For the Lower Gunnison Project, the NED plan includes all increments of the specific project components. For all four subwatersheds, the Preferred Plan is defined as the Proposed Action in the Plan-EA. **Table D-13** presents the components of the NED and Preferred Plans.

Table D-13. Comparison of NED Benefits and Costs. Lower Gunnison Project, Colorado (FY 2017 Dollars, 2.875% Discount Factor)

Subwatershed	Land Treatment	NED Metrics		Included in Plan	
		Benefit Cost Ratio	Net Benefits	NED Plan	Preferred Plan
North Fork	Piping	2.8	\$316,897	Yes	Yes
	SCADA	5.4	\$24,918	Yes	Yes
Crawford	Piping	1.4	\$16,931	Yes	Yes
	SCADA	5.7	\$18,280	Yes	Yes
Uncompahgre	Piping	1.9	\$232,219	Yes	Yes
	SCADA	8.5	\$90,946	Yes	Yes
Bostwick Park	Piping	2.1	\$27,148	Yes	Yes
	SCADA	4.6	\$17,958	Yes	Yes
Total		2.4	\$745,298	Yes	Yes

Supporting Information for Biological Resources

Vegetation

Special Status Plant Species

Two Endangered Species Act (ESA)-protected plant species occur in the project area: clay-loving wild buckwheat and Colorado hookless cactus:

Clay-loving wild buckwheat

Clay-loving wild buckwheat was listed as endangered in 1984 at 49 Federal Register (FR) 28562–28565 due to its extremely limited range and the high risk of habitat loss and fragmentation caused by residential and agricultural development and off-road vehicle travel. The U.S. Fish and Wildlife Service (USFWS) also designated critical habitat for clay-loving wild buckwheat at the same time. No designated critical habitat areas are present in the four subwatersheds of the project area, as shown in Figure 3.4-10.

Clay-loving wild buckwheat is a small, low-growing, densely-branched shrub in the buckwheat family, with dark green linear leaves and small white to cream-colored flowers that bloom from late May through early September. Generally, the plants are found in a sharply defined soil microhabitat (whitish calcareous clay soils derived from Mancos Shale, often mapped as Billings Series soils) on mid to lower slopes of adobe hills. Clay-loving buckwheat occurs with other xerophytic low shrubs such as shadscale, mat saltbush, and black sagebrush. Field observations have suggested that the species is most abundant where biological soil crust cover is not extensive (USFWS 2017; CNHP 2013).

Colorado hookless cactus

Colorado hookless cactus was listed as threatened in 1973 at 44 FR 58868-58870, due to habitat threats and unregulated collection and commercial trade by nurseries and private collectors. No critical habitat has been designated. Colorado hookless cactus is a squat, rounded spiny succulent, usually consisting of a single blue-green stem. The plants are inconspicuous except during their bloom (April and May), when pink flowers develop at the top of the stems. Following the blooming period during dry years, smaller plants can be difficult to locate because the stems may shrink below ground level. In the vicinity of the project area, Colorado hookless cactus is found on river terraces and Mancos Shale formation (adobe hills), often on rocky or gravelly soils. Plant associations include low semi-desert shrubland species such as shadscale, mat saltbush, black sagebrush, and galleta (ECOS 2017; CNHP 2013).

Two Bureau of Land Management (BLM) Sensitive plant species, Colorado desert parsley and Uncompahgre bladderpod, occur in the project area:

Colorado desert parsley

Colorado desert parsley is a low-growing yellow-flowered plant with shiny dark green divided leaves reminiscent of edible parsley. It typically blooms in April. Although it is a perennial plant, its above-ground parts disappear by mid to late summer. According to Lyon and Williams (1998), where Colorado desert parsley occurs in badland hills (its preferred habitat), it is most abundant at or near

the tops of steep barren clay slopes or in gullies. In more mesic sites dominated by sagebrush and mixed mountain shrublands, it can be found in the shrub understory or on bare patches in the interstitial spaces between shrubs. It is known only from Delta, Montrose, and Ouray Counties in Colorado (CNHP 2013).

Uncompahgre bladderpod

Uncompahgre bladderpod is a small, white-flowered plant of the mustard family, with blue-green basal leaves and curved flowering stalks that extend outward from the base of the plant (CNHP 2013). It typically blooms and fruits in April and May, and is difficult to differentiate from other plants in its genus if flowers or fruits are not present. It grows on Mancos Shale-derived soils at the ecotone between pinyon-juniper woodland and salt desert scrub, or sandy soils derived from Jurassic sandstones with sagebrush. Uncompahgre bladderpod is endemic to the east part of Montrose County and the north part of Ouray County, with most documented populations occurring in the Uncompahgre Valley (CNHP 2013).

Invasive Plant Species

Table E-1 presents the state-listed noxious weeds (Colorado Dept. of Agriculture 2016) known from and potentially occurring in the project area by county (CSU 2017; Delta County 2010; Montrose County 2011, 2017; Ouray County 2011), along with the current management priority for each weed assigned by the counties and BLM's UFO (BLM 2016).

1 "List A" weeds are designated for eradication, and are usually less common or thought to be present at levels at which eradication is possible. "List B" weeds are typically well-established and mandated for control and containment. "List C" weeds are species for which the state supports local government's management on public and private lands, but for which there is no mandate for eradication or control.

SC = BLM weed species of concern; x = present but without assigned priority or management directive; -- = not present;
E = eradicate; CC = contain and control; MC = mandated for control; P = priority for management

Special Status Wildlife

Federally Protected Birds and Their Critical Habitats

Gunnison Sage-Grouse

The Gunnison sage-grouse was listed as threatened and critical habitat was designated on November 20, 2014, at 79 FR 69191–69310 and 79 FR 69311–69363. The Gunnison sage-grouse is a sagebrush obligate endemic to Colorado and Utah south of the Colorado River. Breeding grounds (leks) consist of open areas next to tall sagebrush. For nesting and rearing young, the species requires large contiguous patches of sagebrush (greater than 200 acres) with an abundant and relatively tall herbaceous understory, interspersed with wet swales. Wintering sage-grouse feed exclusively on sagebrush leaves.

Rangewide threats facing Gunnison sage-grouse include habitat destruction, modification, or curtailment of its habitat or range, and predation and disease (79 FR 69191–69310). Localized threats include small population size, lack of habitat protection from permanent loss, risk from noxious and invasive weeds, predation, recreation activities, vehicle collisions, fences and power poles that provide perches for predatory raptors, unmanaged lek-viewing, drought impacts, improper grazing management, encroachment of pinyon-juniper woodlands into sagebrush, insufficient amounts of grass and forbs in the sagebrush understory, and low vegetative class diversity in the area's sagebrush communities (CWG 1998, 2011).

Seven distinct populations of Gunnison sage-grouse exist in southwest Colorado and southeast Utah (79 FR 69191–69310). USFWS established critical habitat in the seven population areas, with classifications of “occupied,” “potential/unoccupied,” and “vacant.” Occupied critical habitat was designated in the geographic areas known to be occupied at the time of the species' listing. Areas of potential/unoccupied critical habitat were designated in areas formerly occupied by the species and deemed essential to its conservation. The “potential/unoccupied” critical habitat classification is more specifically “unoccupied habitats that could be suitable for occupation of sage-grouse if practical restoration were applied.” “Vacant” critical habitat is defined by 79 FR 69191–69310 as “suitable habitat for sage-grouse that is separated (not contiguous) from occupied habitats that either has not been adequately inventoried, or has not had documentation of sage-grouse presence in the past 10 years.” [Figure 3.5-4](#) shows the locations of occupied and potential/unoccupied Gunnison sage-grouse designated critical habitat in the project area. No vacant critical habitat is mapped in the project area. The North Fork subwatershed lies outside the documented range of Gunnison sage-grouse and outside areas of designated critical habitat. The Crawford subwatershed lies northeast of documented occupied range of the Crawford population of Gunnison sage-grouse, but encompasses an area of potential/unoccupied designated critical habitat. The Uncompahgre and Bostwick Park subwatersheds encompass areas of occupied and potential/unoccupied designated critical habitat of the Cerro Summit-Cimarron-Sims Mesa Gunnison sage-grouse population. The Gunnison Basin population, the largest and most genetically-viable of the seven populations, occurs in the Gunnison valley in Gunnison County, well outside the project area.

Mexican Spotted Owl

The Mexican spotted owl has not been documented in the four subwatersheds (Table 3.5-3) or near the project area and is therefore dismissed from further analysis in this Plan-EA. There are no

recent or historic Mexican spotted owl records from the project area (BLM 2016). The four subwatersheds lack suitable breeding habitat, which consists of dense old growth conifers on steep canyon or mountain terrain. Numerous spotted owl surveys over the past two decades in the region, including the Dolores and San Miguel watersheds and the Uncompahgre Plateau (BLM 2016), and the Black Canyon of the Gunnison (NPS 2014), all returned negative results. USFWS designated critical habitat for Mexican spotted owl at 69 FR 53182–53298 in Mesa Verde National Park in southwest Colorado and in the Wet Mountains and Pikes Peak area in the Front Range. The species is uncommon, non-migratory, and extremely site-specific in Colorado, with documented nest locations only in designated critical habitat.

Western Yellow-Billed Cuckoo

The western yellow-billed cuckoo was listed as threatened on October 3, 2014 (79 FR 59992–600038), after several years as a candidate for listing. Critical habitat was proposed for the species on August 15, 2014, at 79 FR 48548–48652 (i.e., the “proposed rule”). The yellow-billed cuckoo is a fairly large and secretive migratory songbird that breeds in the United States and winters in South America. Its preferred breeding habitat is low elevation old-growth riparian cottonwood forests or woodlands with dense, scrubby understories of willows or other riparian shrubs. The riparian areas are in broad, open river valleys with a low gradient (less than 3 percent slope) and wide floodplain conditions (greater than 325 feet). Studies in California indicate this species may need extensive stands of riparian forest for nesting success of at least 24 acres in size (Haltermann 1991). Patches chosen as nest sites by cuckoo vary in size and shape from large contiguous stands to irregularly shaped mosaics of dense cottonwoods interspersed with open areas (Haltermann et al. 2015). The yellow-billed cuckoo has a short nesting season—incubation to fledging can be completed in as little as 14 days. Cuckoos arrive on breeding and nesting grounds in Colorado in late May or early June, and depart by early August through early September.

The decline of the yellow-billed cuckoo throughout the western United States has been attributed to destruction of its preferred riparian habitat due to agricultural conversions, flood control projects, and urbanization. In some parts of its breeding range, pesticide use may have affected the yellow-billed cuckoo’s prey base of pest insects such as tent caterpillars, which tend to occur in cyclic outbreaks.

Although it was probably never common in western Colorado, the yellow-billed cuckoo is now considered an extremely rare summer resident and nearly extirpated here (Carter 1998). Only one confirmed nesting occurrence was recorded in western Colorado (the Yampa River near Hayden) during Colorado Breeding Bird Atlas surveys from 1987 through 1994 (Carter 1998). Up until 2003, only one or two unofficial yellow-billed cuckoo observations, and no nesting reports, occurred annually in western Colorado, mostly from the Uncompahgre River and Grand valleys. Since 2003, cuckoos have been documented nearly annually in the North Fork of the Gunnison River Valley (Beason pers. comm.). The Colorado Breeding Bird Atlas II surveys did not detect records for cuckoo in the subwatersheds outside of the North Fork between the 2007 to 2012 survey period (Wickersham 2016).

As shown on Figure 3.5-5, the subwatersheds include a part or all of Western yellow-billed cuckoo critical habitat units 56: CO-3 (North Fork Gunnison River, Delta County) and 57: CO-4 (Uncompahgre River, Delta, Montrose, and Ouray Counties). Critical habitat is defined in the proposed rule (79 FR 48548–48652) as follows: “(1). The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the [ESA], on which are found

those physical or biological features a) essential to the conservation of the species and b) which may require special management considerations or protection, and (2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.”

Federally-Protected Mammals and Their Critical Habitats

Lynx

The lynx was listed as threatened in 2000 at 65 FR 16051–16086. Although it was never abundant, the lynx historically occurred in appropriate habitat in upper montane and subalpine zones throughout central Colorado, and was assumed extirpated from the state by 1973 (Seidel et al. 1998). Threats to lynx include habitat destruction (timber harvest), snow-based winter recreation, low densities of snowshoe hare (their primary prey), and vehicle collisions (USFWS 2017). CPW initiated a reintroduction program in Colorado in 1999, and in 2010 announced that its benchmarks for reintroduction success had been achieved and breeding sub-populations of lynx were established. In Colorado, persistent lynx populations in the state are thought to be centered around the Collegiate Range and in the San Juan Mountains of central and southwest parts of the state. Preliminary results of recent monitoring continue to confirm the presence of lynx in the San Juan Mountains (Ivan et al. 2015). Individuals have been tracked in the past on the Gunnison and Grand Mesa National Forests (Theobald and Shenk 2011).

Primary lynx habitat (denning habitat) in Colorado includes coniferous forests of spruce and fir or lodgepole pine. Secondary habitat consists of aspen or Douglas-fir mixed with primary coniferous habitat, between 8,000 and 11,500 feet elevation (Shenk 2009). Lynx typically forage in uneven-aged subalpine forests with shrubs or small trees that provide habitat for snowshoe hares, their primary prey. Small forest openings with low cover enhance foraging habitat, although lynx mostly avoid openings larger than several acres. Closed canopy subalpine forests with significant dead and down trees provide optimum denning habitat. In areas with deep winter snow, foraging habitat must contain shrubs or small trees of sufficient height to extend above snowpack.

USFWS has not designated critical habitat for lynx in Colorado because the Southern Rocky Mountains in Colorado do not meet the Primary Constituent Elements of critical habitat required by the ruling (lynx habitat and snowshoe hare densities in Colorado are considered patchy and marginal). However, the U.S. Forest Service and other cooperating agencies have developed mapping of lynx potential habitat in Colorado based on geospatial landcover data (CPW 2016). Lynx potential habitat mapping intersects the Crawford and Bostwick Park subwatersheds (Figure 3.5-6).

Wolverine

The wolverine has not been documented in the four subwatersheds (Table 3.5-3) or near the project area and is therefore dismissed from further analysis in this Plan-EA. Deep, persistent, and reliable spring snow cover (April 15 to May 14) is the best overall predictor of wolverine occurrence in the contiguous United States. In the southern portion of the species' range (i.e., in the vicinity of the subwatersheds), the distribution of wolverine would be limited to elevations higher than the subwatersheds (i.e., the alpine zone). Furthermore, there are no documented viable populations of wolverine in western Colorado. Although numerous historical records of wolverines from the Rocky Mountains exist, the species is believed to have been extirpated from Colorado, New Mexico, and

Wyoming by the early 1900s (Copeland et al. 2010). Only one individual has been documented in the Southern Rocky Mountains (in north-central Colorado) since 1919 (CPW 2017).

BLM Sensitive Mammals

Two species of prairie dog are found in appropriate habitat in the project area, and both are considered sensitive by BLM. The white-tailed prairie dog occurs in northwestern and west-central Colorado, and has a wide distribution across all four watersheds (CPW 2016). It prefers level to gently sloping grasslands and open semi-desert shrublands from 5,000 to 10,000 feet in elevation, although most records are from below 8,500 feet (Armstrong et al. 2011). White-tailed prairie dogs occur in loosely organized colonies and their burrows and mounds may be present in the margins of irrigated lands, and in dams and irrigation ditch banks, adjacent to and near semi-desert shrublands and grasslands. Gunnison's prairie dog occurs in the Gunnison, upper Arkansas, and South Platte River drainages, and in the San Luis Valley and southwestern Colorado at elevations up to 12,000 feet (Armstrong et al. 2011). CPW (2016) maps Gunnison's prairie dog overall range only in the Bostwick Park subwatershed, on a small area of BLM land east of Highway 50 near the Cimarron and Little Cimarron confluence. Like white-tailed prairie dogs, Gunnison's prairie dogs occur in loosely organized colonies in semi-desert shrublands and grasslands, but also montane shrublands (Armstrong et al. 2011). Primary threats to prairie dogs are the sylvatic plague (BLM 2016), recreational shooting, and extermination (to remove them from agricultural lands). The BLM's primary purpose in tracking prairie dog colonies in the region is to monitor potential nesting locations for burrowing owl, another BLM sensitive species (Holsinger pers. comm.). Prairie dog burrows serve as nesting sites for burrowing owl and provide shelter for a variety of rodents and reptiles. Prairie dogs are also a major source of prey for several raptor species in the region.

Bats

Three species of bats potentially found in appropriate habitat in all four subwatersheds are considered sensitive by BLM—the spotted bat, the fringed myotis, and Townsend's big-eared bat (Table 3.5-4). The following information about the three BLM sensitive bat species was synthesized from the Colorado Bat Working Group (CBWG 2010). Apparently quite rare in Colorado, spotted bats prefer rocky canyons and have been observed or captured in ponderosa pine woodlands, montane forests, pinyon-juniper woodlands, semi-desert shrublands, riparian vegetation, and over open sandbars. Individuals forage alone for moths, grasshoppers, beetles, katydids, and other insects. Lactating females have been captured in Colorado, but nursery and roost sites have not been located. Little is known about hibernation or its migratory movements. The fringed myotis, thought to occur in scattered populations at moderate elevations in Colorado, feeds on moths, spiders, and beetles over semi-desert shrublands, coniferous woodlands, Gambel oak shrublands, and meadows, especially near water. It uses caves, mines, and buildings as day and night roosts, and seasonal migration is not thought to be extensive. No nursery colonies have been reported in Colorado. The Townsend's big-eared bat feeds on moths, beetles, flies, and wasps along the edges of semi-desert shrublands, pinyon-juniper woodlands, and open montane forests. It can be found throughout Colorado, but its distribution may be limited to areas near caves and abandoned mines which it uses for day roosts, nursery colonies, and hibernacula. Day roosts have also been documented in crevices on rock cliffs and abandoned buildings. Like the fringed myotis, Townsend's big-eared bats do not make major seasonal migrations. Each of these bat species could be expected

to forage in appropriate habitats in the subwatersheds, and use rock outcrops, caves, or buildings, as roosts.

Bighorn Sheep

CPW introduced bighorn sheep to the region in the 1980s and populations are closely managed on BLM lands. The bighorn inhabits steep, mountainous or hilly terrain with grass, low shrubs, rock cover, and areas near open escape and cliff retreats (BLM 2016). In the North Fork subwatershed, a small amount of overall bighorn sheep range on BLM land is mapped near on the north-facing steep slopes of Scenic Mesa along the North Fork River, about one mile upstream of the Gunnison River confluence. In the Crawford subwatershed, a small amount of overall range (CPW 2016) on BLM lands is mapped in the Smith Fork canyon near the Gunnison River confluence. Overall range is also mapped in the Roubideau Creek area near the west and north boundary of the Uncompahgre subwatershed and near the east boundary of the Bostwick Park subwatershed in the Gunnison Gorge.

BLM Sensitive Birds

Raptors

Each of the BLM Sensitive raptor species in Table 3.5-4 has the potential to occur in appropriate habitat in each subwatershed. Except for ferruginous hawk, each raptor has documented nest sites within or near at least one of the subwatersheds.

Bald eagles are rare summer residents and fairly common late fall and winter residents in the subwatersheds. CPW (2016) maps bald eagle winter concentration areas in the North Fork and Uncompahgre river corridors, and winter feeding grounds and roosts across the valleys (Figure 3.5-3). Bald eagles forage across open pastures and low shrublands in winter for rodents and carrion, and along riverbanks for stranded fish or waterfowl. Nesting is rare in the region, but a few active nest sites have been recently documented (Figure 3.5-3) in or near the subwatershed. Nests are typically constructed in the crowns of tall trees along forested rivers and lakes. Nesting is initiated as early as January and young are typically fledged before August. Human disturbance is thought to cause stress to nesting bald eagles, although some pairs have successfully nested near golf courses and other areas of high human activity (Kingery 1998).

The golden eagle hunts widely for rabbits and rodents over a variety of habitats in and near the subwatersheds, from low-elevation shrublands to alpine tundra. Nests are constructed on cliffs and steep escarpments in shrublands and grasslands. Mated pairs return to the same nest site or nearby alternate nest sites each year. Nesting building can initiate as early as January, with occupancy usually occurring in mid-April. Young are fledged between May and early August, depending on the year (Kingery 1998).

The peregrine falcon hunts in open country near cliff habitat, often near water such as rivers, lakes, and marshes. It nests on ledges or holes on cliff faces and crags between mid-March and mid-August. CPW (2016) maps one potential peregrine nesting site in the project area, on Needle Rock on BLM land in the Crawford subwatershed. A recently active peregrine nest on the south side of Needle Rock has been noted by residents of the area.

The northern goshawk nests in a variety of mid- to high-elevation forest types, including ponderosa pine, lodgepole pine, spruce-fir, and aspen (Kingery 1998). Migrants and wintering individuals occur in all coniferous forest types, including pinyon-juniper woodlands. Based on spatial mapping of vegetation communities in the subwatersheds, northern goshawk is expected as primarily a wintering resident or migrant in subwatersheds; and as summer resident/nesting montane or subalpine forests in south part of Bostwick Park. Nesting occurs between May through mid-August.

The ferruginous hawk prefers open, rolling and/or rugged terrain in grasslands, shrubsteppe communities, or cultivated fields. It nests on cliffs and rock outcrops. No nesting records exist in the project area (Holsinger pers. comm.). Wintering birds could be present in appropriate habitat in the four subwatersheds, especially open agricultural fields where burrowing rodents are present, but spring and fall migrants are more likely (Holsinger pers. comm.).

The burrowing owl prefers level to gently-sloping grasslands and semi-desert grasslands. Prairie dog colonies are commonly used for shelter and nesting. Several recent breeding records exist in the Uncompahgre River valley (Holsinger pers. comm.). BLM considers any prairie dog burrows to be potential nest sites for burrowing owl across the subwatersheds. Nesting occurs between April and July.

Brewer's Sparrow

Brewer's sparrow breeds primarily in sagebrush shrublands, and less commonly in tall semi-desert shrublands, and occasionally in open pinyon-juniper woodlands with shrub understories. This species requires relatively large, contiguous shrubland patches for nesting. Breeding records exist for southeast Delta County and the Uncompahgre Valley (Kingery 1998; Wickersham 2016). Nest building begins in mid-May, nests are occupied by June, and young are fledged by late July. Brewer's sparrows select nest sites in open shrublands with relatively tall shrubs on gentle slopes far from habitat edges. Migrants occur in wooded, brushy, and weedy riparian, agricultural, and urban areas, and occasionally in pinyon-juniper woodlands.

BLM Sensitive Reptiles

Midget Faded Rattlesnake

The midget-faded rattlesnake, known only from Mesa, Delta, and Garfield Counties in Colorado (Hammerson 1999) is a BLM sensitive species due to its apparent rarity and small range. A major threat to the species is the long-term persecution by humans killing snakes out of concern for public safety. Taxonomists do not agree whether this small distinctly colored snake represents a subspecies of the western rattlesnake (*Crotalus viridis v. concolor*) or a separate species (Hammerson 1999). The midget-faded rattlesnake reaches about 24 inches in length, with brownish dorsal blotches on a tan, cream, or yellow-brown background color. In older adults the blotches are faded or sometimes absent. The species can occupy a wide range of vegetation communities, but appears to prefer rocky areas, often near riparian corridors, especially with a south aspect. They are active outside their hibernacula from about May to September, and young are produced between late August and early October. The BLM's UFO is currently working with researchers to develop a predictive habitat model for midget faded rattlesnake (Holsinger pers. comm.). Preliminary modeling predicts that the north part of the Uncompahgre subwatershed (north of Olathe) is the most likely part of the project area to be occupied by the species.

Federally Protected Fish Species

Bonytail Chub

The bonytail chub was listed as an endangered species in 1980 and critical habitat was designated in 1994 (USFWS 1994). Bonytail chubs are the rarest fish in the Colorado River Basin and can reach lengths of up to 22 inches and weigh as much as 2.4 pounds (USFWS 1994, USFWS 2002a).

Bonytail chub were historically widespread in large rivers of the Colorado River Basin; however, beginning in the 1950's, the species' population and range shrank dramatically (USFWS 2002a). The wild population generally consists of low numbers of mature fish and very low to non-existent recruitment (USFWS 1994). In the Lower Colorado River Basin, the species has been recorded in Lake Mojave and Lake Havasu; in the Upper Colorado River Basin, the species has been documented in the Yampa River in Dinosaur National Monument, the Green River in Desolation and Gray Canyons, and the Colorado River in Black Rocks and Cataract Canyon (USFWS 1994). The species is rarely found in the Green River and Colorado River subbasins (USFWS 2002a).

The bonytail chub inhabits pools and eddies in the warm waters of the Colorado River mainstem and tributaries (USFWS 2002a). Because the species was extirpated from most its historic range prior to extensive surveys, little is known about specific habitat preferences. Spawning takes place in pools and eddies over rocky substrates with silt-boulder mixtures and flooded bottomlands are used for nursery habitat (USFWS 2002a). Ongoing recovery efforts by the Upper Colorado River Endangered Fish Recovery Program have included a stocking program for bonytail chub; as part of this program, fish have been released into the Yampa, Green and Colorado Rivers (Upper Colorado River Endangered Fish Recovery Program 2015).

The primary threats to the bonytail chub include streamflow regulation, habitat modification, predation by nonnative fish species, hybridization, and pesticides and pollutants (USFWS 2002a).

Colorado Pikeminnow

The Colorado pikeminnow was listed as an endangered species in 1967 and critical habitat was designated in 1994 (USFWS 1994). The species is North America's largest minnow species and can reach up to approximately 6 feet in length and weigh as much as 80 pounds (USFWS 2002b). Colorado pikeminnow prefer fast, muddy rivers with quiet backwaters, pools, deep runs, and eddies maintained by high spring flows (USFWS 2002b).

Colorado pikeminnow have historically occurred throughout the Colorado River system in Colorado, Wyoming, Utah, New Mexico, Arizona, Nevada, California, and Mexico. Presently, three wild populations occur in the Green River, upper Colorado River, and San Juan River sub-basins (USFWS 2002b). The decline of the species throughout its range is attributed to extensive habitat loss, modification, and fragmentation and blocked fish passage associated with dam construction and operations. Other threats include competition with and predation by nonnative fish species, and decreased water quality from pesticides and contaminants (specifically selenium and mercury) (USFWS 2002b).

Recovery efforts include development of flow recommendations, mechanical removal of nonnative fishes, modifying or removing instream water diversion structures to provide fish passage, monitoring fish population numbers and development of backwaters for early life stages (AUSPC

2011). According to the fiscal year 2016 annual project report, 33 sub-adult and adult Colorado pikeminnow were captured in the Redlands fish passage during 2016 at the Redlands Diversion Dam on the Gunnison River (CRRP 2016).

The primary threats to the Colorado pikeminnow include streamflow regulation, habitat modification, competition with and predation by nonnative fish species, and pesticides and pollutants (USFWS 2002b).

Humpback Chub

The humpback chub was listed as an endangered species in 1967; critical habitat was designated in 1994 (USFWS 1994). Humpback chubs are a medium sized minnow (averaging less than 20 inches in length) endemic to the Colorado River basin (USFWS 1990). The species has a unique body shape that is believed to aid in navigating turbulent, deep-water habitats of the Colorado River system.

Humpback chub are highly adapted to turbid water conditions with fluctuating hydrology; the species lives and completes its life cycle in the canyon-bound reaches of the Colorado mainstem and larger tributaries (USFWS 2002c). Within the mainstem of the Colorado River, the humpback chubs have been recorded in a variety of habitats – including swift currents, deep pools, riffles, shoreline eddies, and rapids (USFWS 1994). Adults and juveniles require eddies and sheltered shoreline habitats. (USFWS 2002c) Humpback chub are reproductive from May to July, depending on the location. Spawning generally occurs over gravel and cobble deposits at or soon after peak flows in spring (USFWS 2002c).

The humpback chub's historic distribution included portions of the mainstem Colorado River and four tributaries: the Green, Yampa, White, and Little Colorado Rivers (USFWS 1994). The species' most recently known distribution includes the Yampa River in Dinosaur National Monument (Colorado), The Green River in Desolation Canyon, Gray Canyon, and Dinosaur National Monument (Utah and Colorado), the Little Colorado River (Arizona), and several stretches of The Colorado River – Marble and Grand Canyons (Arizona), Cataract and Westwater Canyons (Utah), and Black Rocks (Colorado) (USFWS 1990).

The primary threats to the humpback chub include streamflow regulation, habitat modification, predation by nonnative fish species, parasitism, hybridization with other native *Gila* species, and pesticides and pollutants (USFWS 2002c).

Greenback Cutthroat Trout

The greenback cutthroat trout (*Onchorhynchus clarki stomias*) was listed as an endangered species in 1967, under a precursor to the ESA (32 FR 4001). It was re-listed as endangered under the current ESA in 1974, and in 1978 downlisted to threatened status, with a 4(d) rule allowing catch and release (43 FR 16343 16345).

There are two varieties of native cutthroat trout present in the lower Gunnison project area: Colorado River cutthroat trout (blue lineage) and greenback cutthroat trout (green lineage). Until recently, it was believed the green lineage cutthroat trout historically occupied the colder waters of the South Platte and Arkansas River basins in Colorado and southeastern Wyoming (Young 2009). However, the genetic signature associated with greenback cutthroat trout has been observed in a number of

cutthroat trout collected west of the continental divide, once considered Colorado River cutthroat trout (Metcalf et al. 2007). As a result, the Gunnison, Dolores and the Colorado River on the West Slope are now included in the historic range of the green lineage cutthroat trout (USFWS 2014). The greenback cutthroat trout will continue to receive protection under the ESA until such time the U.S. Fish and Wildlife Service completes a status review of all cutthroat populations in light of the recent genetic and meristic studies (CPW 2015). The blue lineage cutthroat trout is discussed in the following section as a BLM sensitive species.

Green lineage cutthroat trout occupy streams in watersheds that have little or no degradation associated with human activity (i.e., do not contain excess amounts of fine sediment and flow through healthy and intact riparian areas) (Dare et al. 2011). Stream temperature is the most important habitat variable for stream-dwelling fish. Cutthroat trout favor pool habitats, which provide cover from predators, refuge from streamflow and inclement conditions including floods and winter ice formations. Lake and stream-dwelling fish must have access to adequate spawning habitat (riffles), preferably with shading cover. Spawning may occur from April through July. Young shelter in shallow backwaters.

The primary threats to the greenback cutthroat trout include habitat alteration from mining, agriculture, and water development; and introductions and invasions of non-native trout (Young 2009). Known conservation populations of green lineage cutthroat trout have been identified upstream of the subwatersheds in the GMUG National Forest.

Razorback Sucker

The razorback sucker was listed as an endangered species in 1991 (USFWS 1991) and critical habitat was designated in 1994 (USFWS 1994). The razorback sucker can reach 3 feet in length and weigh up to 13 pounds, qualifying as one of North America's largest suckers (USFWS 2002d). The razorback sucker is found in large rivers with depths ranging from 4 to 10 feet as well as some reservoirs. Habitat for razorback sucker varies seasonally, with deep runs, eddies, backwaters, and flooded off-channels used in spring, runs and shallow pools in summer, and low-velocity runs, pools, and eddies in winter (USFWS 2002d). Turbidity can range from clear to muddy, and substrate can range from mud to sand to gravel. This species may spawn in a variety of river or reservoir habitats, and young require nursery environments with quiet, warm, shallow waters (USFWS 2002d).

Historically, razorback sucker was widespread in warm-water reaches of large rivers within the Colorado River Basin, from Wyoming south to Mexico (USFWS 2002d). The species is currently found in the Green River, upper Colorado River, and San Juan River sub-basins; lower Colorado River between Lake Havasu and Davis Dam; reservoirs of Lakes Mead and Mohave; tributaries of the Gila River sub-basin; and in local areas under intensive management such as Cibola High Levee Pond, Achii Hanyo Native Fish Facility, and Parker Strip (USFWS 2002d).

The Recovery Program experimentally stocked razorback sucker in the lower Gunnison River (i.e., downstream of Delta) during the mid-1990's and initiated an integrated stocking plan in 2003 (Reclamation 2008). Successful spawning activity has been documented in the Gunnison River between the Redlands Diversion and Delta (Reclamation 2008). According to the fiscal year 2010 annual project report, 27 razorback suckers ascended the fish passageway at the Redlands Diversion Dam on the Gunnison River (CRRP 2010). One razorback sucker was captured in the Redlands fish passage during 2016 (CRRP 2016).

The primary threats to the razorback sucker include streamflow regulation, habitat modification, predation by nonnative fish species, and pesticides and pollutants (USFWS 2002d).

BLM Sensitive Amphibian and Fish Species

Northern Leopard Frog

The northern leopard frog is known to occur in Delta County (CNHP 2015). Typical habitats include wet meadows, springs and the banks and shallows of marshes, ponds, glacial kettle ponds, beaver ponds, lakes, reservoirs, streams, and irrigation ditches (NatureServe 2015). The northern leopard frog will breed in shallow, quiet areas of permanent bodies of water, in beaver ponds, and in seasonally flooded areas adjacent to or contiguous with permanent pools or streams. They may forage along the water's edge or in nearby meadows or fields. Part of their statewide decline seems to be due to predation by the bullfrog (*Rana catesbiana*), which was native to the eastern United States but introduced in Colorado (Lyon and Williams 1998).

Canyon Treefrog

Distribution of the canyon treefrog includes Delta County (IUCN 2004). The canyon treefrog prefers habit along rocky, intermittent and perennial stream courses in canyons. Its current range includes the canyons of the west-central and southwestern Colorado (NatureServe 2015). The canyon tree frog typically breeds in temporary or permanent pools along intermittently flowing streams, primarily in spring (April-July) and perhaps sometimes after heavy rains in summer. Larvae metamorphose into small frogs as early as late July.

Colorado River Cutthroat Trout

The Colorado River cutthroat trout is native to Colorado, but is seldom found to be genetically pure due to hybridization with introduced Rainbow trout (*Oncorhynchus mykiss*). Historic range was on the West Slope (west of the continental divide) and included the Yampa and White Rivers (USFWS 2014). The range has been reduced due to competition with introduced, non-native trout species such as brook trout, hybridization with non-native trout, disease (i.e., whirling disease) and habitat alteration such as fragmentation and dewatering by water diversions. They typically occur as isolated populations in high elevation lakes and streams.

The North Fork of the Gunnison is within the historic range for this fish (Hirsch et al. 2013). Of the 663 kilometers of historic stream habitat in the North Fork, only 77.3 km is currently occupied by the Colorado River cutthroat trout, representing 11 percent of the historic range (Hirsch et al. 2013). This fish has been documented in the North Fork, Crawford, and Uncompahgre subwatersheds (CNHP 2015; Hirsch et al. 2013).

Bluehead Sucker

The bluehead sucker is found in only 45 percent of its historic range, but is known to occur in Delta County (Bezzarides and Bestgen 2002; CNHP 2015). The bluehead sucker prefers large rivers and mountain streams and is rarely found in lakes. Occupied habitat is variable, from cold, clear mountain streams to warm, turbid streams. This fish typically prefers moderate to fast flowing water above rubble-rock substrate. Young prefer quiet shallow areas near shoreline. Spawning at higher elevations occurs mid- to late summer.

Dams and reservoirs, water diversions and associated changes in flow, stream channelization, and general deterioration of riparian corridors are major threats to this species (Ptacek et al. 2005). Hybridization between the non-native white sucker (*Catostomus commersoni*) and bluehead sucker has been documented, as well as individuals with genetic contributions from the white sucker, bluehead sucker, and native flannelmouth sucker (*Catostomus latipinnis*) (McDonald et al. 2008). The bluehead sucker is vulnerable to predation from non-native fish species including northern pike and brown trout (Webber et al. 2012). Development in riparian areas can affect the quality of occupied bluehead sucker habitat.

Flannelmouth Sucker

The flannelmouth sucker prefers warm moderate- to large-sized rivers. They are seldom captured in small creeks and are typically absent from impoundments (UDNR 2006). They prefer pool habitat and deeper runs, often near tributary mouths. They also occupy riffles and backwaters. They generally occupy streams with minimal vegetation, moderate to high turbidities and high spring flows. Channel depths can range from 1 to 6 feet, with substrates consisting of rocks, gravel or mud. Young usually occupy shallower water than adults. Seasonal migrations are made in the spring to suitable spawning habitat. Habitat degradation (including changes in substrate, instream habitat complexity, and flow regimes) and interactions with non-native species have been identified as primary threats to flannelmouth sucker. Obstruction to movement caused by dams or diversions has resulted in the loss of spawning habitat and habitat quality (changes to channel geometry, water chemistry, water temperature and flow regimes (Rees et al. 2005). Some dams may have a positive impact by creating a barrier to the upstream spawning of non-native fish species that prey on, hybridize, and compete with flannelmouth sucker for resources (CPW 2015). Therefore, dams and diversions can be part of a conservation strategy to maintain species survival.

Roundtail Chub

The roundtail chub uses slow moving, deep pools for cover and feeding (UDNR 2006). They occupy medium to large warm water streams and rivers with rocky runs, rapids, and pools. Historical range included the Colorado River and its tributaries from southwestern Wyoming, Utah, and Colorado southward to the Little Colorado River confluence in Arizona, south of which the species occurred only in primary tributaries of the Colorado River (Carman 2006). The roundtail chub is not known to occur in the Gunnison River drainage or tributaries. They also inhabit large reservoirs in the upper Colorado River system. They generally prefer cobble-rubble, sand-cobble, or sand-gravel substrates. Adults prefer pools associated with undercut banks and other types of cover, while young fish inhabit shallower water with lower flows. Runs and riffles are used to feed. Spawning begins in June to early July. Their decline in the Gunnison River has been attributed in part to cold water releases downstream of Curecanti Dam (Woodling 1985).

Lists of Species Mentioned in the Plan-EA Text or Appendix E

Tables E-2 and E-3, respectively, list plant and wildlife species mentioned in the Plan-EA or Appendix E.

Table E-2. Common and Scientific Names of Plant Species Mentioned in the Plan-EA Text or Appendix E.

Common Name	Scientific Name	T & E Species	BLM Sensitive Species	Non-Native
Antelope bitterbrush	<i>Purshia tridentata</i>			
Aspen	<i>Populus tremuloides</i>			
Baltic rush	<i>Juncus arcticus</i>			
Basin big sagebrush	<i>Artemisia tridentata ssp. tridentata</i>			
Black sagebrush	<i>Artemisia nova</i>			
Blue spruce	<i>Picea pungens</i>			
Bottlebrush squirreltail	<i>Elymus elymoides</i>			
Boxelder	<i>Acer negundo</i>			
Broom snakeweed	<i>Gutierrezia sarothrae</i>			
Bud sagebrush	<i>Picrothamnus desertorum</i>			
Canada thistle	<i>Cirsium arvense</i>			X
Cattails	<i>Typha sp.</i>			
Chokecherry	<i>Prunus virginiana</i>			
Clay-loving wild buckwheat	<i>Eriogonum pelinophilum</i>	X		
Cliff fendlerbush	<i>Fendlera rupicola</i>			
Colorado desert parsley	<i>Lomatium concinnum</i>		X	
Colorado hookless cactus	<i>Sclerocactus glaucus</i>	X		
Common cocklebur	<i>Xanthium strumarium</i>			X
Cow parsnip	<i>Heracleum sphondylium</i>			
Coyote willow	<i>Salix exigua</i>			
Crested wheatgrass	<i>Agropyron cristatum</i>			X
Dandelion	<i>Taraxacum officinale</i>			X
Douglas-fir	<i>Pseudotsuga menziesii</i>			
Downy brome (cheatgrass)	<i>Bromus tectorum</i>			X
Drummond's willow	<i>Salix drummondiana</i>			
Dwarf blueberry	<i>Vaccinium cespitosum</i>			
Elk sedge	<i>Carex geyeri</i>			
Engelmann spruce	<i>Picea engelmannii</i>			
Field bindweed	<i>Convolvulus arvensis</i>			X
Fourwing saltbush	<i>Atriplex canescens</i>			
Fremont cottonwood	<i>Populus fremontii</i>			
Galleta	<i>Pleuraphis jamesii</i>			
Gambel oak	<i>Quercus gambelii</i>			
Greasewood	<i>Sarcobatus vermiculatus</i>			
Halogeton	<i>Halogeton glomeratus</i>			X
Hoary cress (whitetop)	<i>Cardaria sp.</i>			X

Table E-2. Common and Scientific Names of Plant Species Mentioned in the Plan-EA Text or Appendix E.

Common Name	Scientific Name	T & E Species	BLM Sensitive Species	Non-Native
Houndstongue	<i>Cynoglossum officinale</i>			X
Indian rice grass	<i>Achnatherum hymenoides</i>			
Jointed goat grass	<i>Aegilops cylindrica</i>			X
Kochia	<i>Bassia scoparia</i>			X
Mat saltbush	<i>Atriplex corrugata</i>			
Meadow-rue	<i>Thalictrum sp.</i>			
Mountain mahogany	<i>Cercocarpus montanus</i>			
Mountain big sagebrush	<i>Artemisia tridentata ssp. vaseyana</i>			
Mountainlover	<i>Paxistima myrsinites</i>			
Narrowleaf cottonwood	<i>Populus angustifolia</i>			
Oregon grape	<i>Mahonia repens</i>			
Oxeye daisy	<i>Leucanthemum vulgare</i>			X
Pinyon pine	<i>Pinus edulis</i>			
Prickly pear	<i>Opuntia sp.</i>			
Puncturevine	<i>Tribulus terrestris</i>			X
Purple loosestrife	<i>Lythrum salicaria</i>			X
Rabbitbrush	<i>Chrysothamnus sp.</i>			
Redosier dogwood	<i>Cornus sericea</i>			
Redstem filaree (stork's bill)	<i>Erodium cicutarium</i>			X
Reed canarygrass	<i>Phalaroides arundinacea</i>			
Rocky Mountain juniper	<i>Juniperus scopulorum</i>			
Rubber rabbitbrush	<i>Chrysothamnus nauseosus</i>			
Russian knapweed	<i>Acroptilon repens</i>			X
Russian olive	<i>Elaeagnus angustifolia</i>			X
Salt cedar (tamarisk)	<i>Tamarix sp.</i>			X
Saltbush	<i>Atriplex spp.</i>			
Saltgrass	<i>Distichlis stricta</i>			
Scentless chamomile	<i>Tripleurospermum perforata</i>			X
Sea-blight	<i>Suaeda torreyana</i>			
Shadscale	<i>Atriplex confertifolia</i>			
Siberian elm	<i>Ulmus pumila</i>			
Silver buffaloberry	<i>Shepherdia argentea</i>			
Snowberry	<i>Symphoricarpos sp.</i>			
Softstem bulrush	<i>Schoenoplectus tabernaemontani</i>			
Spiny horsebrush	<i>Tetradymia spinosa</i>			
Strapleaf willow	<i>Salix ligulifolia</i>			

Table E-2. Common and Scientific Names of Plant Species Mentioned in the Plan-EA Text or Appendix E.

Common Name	Scientific Name	T & E Species	BLM Sensitive Species	Non-Native
Subalpine fir	<i>Abies lasiocarpa</i>			
Sweetclover	<i>Melilotus</i> spp.			X
Thinleaf alder	<i>Alnus incana</i> ssp. <i>tenuifolia</i>			
Three-leaf sumac	<i>Rhus trilobata</i>			
Three-square bulrush	<i>Schoenoplectus pungens</i>			
Tumbleweed (Russian thistle)	<i>Salsola kali</i>			X
Uncompahgre bladderpod	<i>Lesquerella</i> (aka <i>Physaria</i>) <i>vicina</i>		X	
Utah juniper	<i>Juniperus osteosperma</i>			
Utah serviceberry	<i>Amelanchier utahensis</i>			
Winterfat	<i>Krascheninnikovia lanata</i>			
Wyoming big sagebrush	<i>Artemisia tridentata</i> ssp. <i>wyomingensis</i>			
Yellow toadflax	<i>Linaria vulgaris</i>			X

Table E-3. Common and Scientific Names of Wildlife Species Mentioned in the Plan-EA Text and in Appendix E.

Common Name	Scientific Name	Mammal	Fish	Reptile	Amphibian	Bird
American avocet	<i>Recurvirostra americana</i>					X
American badger	<i>Taxidea taxus</i>	X				
American coot	<i>Fulica americana</i>					X
American kestrel	<i>Falco sparverius</i>					X
American peregrine falcon	<i>Falco peregrines</i>					X
American robin	<i>Turdus migratorius</i>					X
Bald eagle	<i>Haliaeetus leucocephalus</i>					X
Beaver	<i>Castor canadensis</i>	X				
Belted kingfisher	<i>Ceryle alcyon</i>					X
Black bear	<i>Ursus americanus</i>	X				
Black swift	<i>Cypseloides niger</i>					X
Black-billed magpie	<i>Pica pica</i>					X
Black-chinned hummingbird	<i>Archilochus alexandri</i>					X
Bluehead sucker	<i>Catostomus discobolus</i>		X			
Bobcat	<i>Lynx rufus</i>	X				
Bonytail chub	<i>Gila elegans</i>		X			
Brewer's blackbird	<i>Euphagus cyanocephalus</i>					X
Brewer's sparrow	<i>Spizella breweri</i>					X

Table E-3. Common and Scientific Names of Wildlife Species Mentioned in the Plan-EA Text and in Appendix E.

Common Name	Scientific Name	Mammal	Fish	Reptile	Amphibian	Bird
Broad-tailed hummingbird	<i>Selasphorus platycercus</i>					X
Brown-capped rosy-finch	<i>Leucosticte australis</i>					X
Bufflehead	<i>Bucephala albeola</i>					X
Bullsnake	<i>Pituophis catenifer</i>			X		
Burrowing owl	<i>Athene cunicularia</i>					X
Canada goose	<i>Branta canadensis</i>					X
Canyon tree frog	<i>Hyla arenicolor</i>				X	
Chipmunks	<i>Neotamias</i> spp.	X				
Chipping sparrow	<i>Spizella passerina</i>					X
Cinnamon teal	<i>Anas cyanoptera</i>					X
Collared lizard	<i>Crotaphytus collaris</i>			X		
Colorado pikeminnow	<i>Ptychocheilus lucius</i>		X			
Colorado River cutthroat trout	<i>Oncorhynchus clarki pleuriticus</i>		X			
Common merganser	<i>Mergus merganser</i>					X
Common nighthawk	<i>Chordeiles minor</i>					X
Common raven	<i>Corvus corax</i>					X
Cooper's hawk	<i>Accipiter cooperii</i>					X
Coyote	<i>Canis latrans</i>	X				
Desert cottontail rabbit	<i>Sylvilagus audubonii</i>	X				
Dusky grouse	<i>Dendragapus obscurus</i>					X
Elk	<i>Cervus canadensis</i>	X				
European starling	<i>Sturnus vulgaris</i>					X
Fence lizard	<i>Sceloporus undulatus</i>			X		
Ferruginous hawk	<i>Buteo regalis</i>					X
Flammulated owl	<i>Otus flammeolus</i>					X
Flannelmouth sucker	<i>Catostomus latipinnis</i>		X			
Fringed myotis	<i>Myotis thysanodes</i>	X				
Gadwall	<i>Anas strepera</i>					X
Golden eagle	<i>Aquila chrysaetos</i>					X
Grace's warbler	<i>Dendroica graciae</i>					X
Gray vireo	<i>Vireo vicinior</i>					X
Great blue heron	<i>Ardea herodias</i>					X
Greater sandhill crane	<i>Grus canadensis tabida</i>					X
Great-horned owl	<i>Bubo virginianus</i>					X
Greenback cutthroat trout	<i>Oncorhynchus clarki stomias</i>		X			
Green-tailed towhee	<i>Pipilo chlorurus</i>					X
Green-winged teal	<i>Anas crecca</i>					X

Table E-3. Common and Scientific Names of Wildlife Species Mentioned in the Plan-EA Text and in Appendix E.

Common Name	Scientific Name	Mammal	Fish	Reptile	Amphibian	Bird
Gunnison sage-grouse	<i>Centrocercus minimus</i>					X
Gunnison's prairie dog	<i>Cynomys gunnisoni</i>	X				
Horned lark	<i>Eremophila alpestris</i>					X
House sparrow	<i>Passer domesticus</i>					X
House wren	<i>Troglodytes aedon</i>					X
Humpback chub	<i>Gila cypha</i>		X			
Juniper titmouse	<i>Baeolophus griseus</i>					X
Killdeer	<i>Charadrius vociferus</i>					X
Lesser yellowlegs	<i>Tringa flavipes</i>					X
Lewis's woodpecker	<i>Melanerpes lewis</i>					X
Lynx	<i>Lynx canadensis</i>	X				
Mallard	<i>Anas platyrhynchos</i>					X
Mexican spotted owl	<i>Strix occidentalis lucida</i>					X
Midget faded rattlesnake	<i>Crotalus viridis concolor</i>			X		
Mink	<i>Neovison vison</i>	X				
Shira's moose	<i>Alces alces shirasi</i>	X				
Mountain bluebird	<i>Sialia currucoides</i>					X
Mountain chickadee	<i>Poecile gambeli</i>					X
Mountain cottontail rabbit	<i>Sylvilagus nuttallii</i>	X				
Mountain lion	<i>Puma concolor</i>	X				
Mule deer	<i>Odocoileus hemionus</i>	X				
Muskrat	<i>Ondatra zibethicus</i>	X				
Northern harrier	<i>Circus cyaneus</i>					X
Northern flicker	<i>Colaptes auratus</i>					X
Northern goshawk	<i>Accipiter gentilis</i>					X
Northern leopard frog	<i>Rana pipiens</i>				X	
Northern racoon	<i>Procyon lotor</i>	X				
Pied-billed grebe	<i>Podilymbus podiceps</i>					X
Pinyon jay	<i>Gymnorhinus cyanocephalus</i>					X
Plateau striped whiptail	<i>Cnemidophorus velox</i>			X		
Plumbeous vireo	<i>Vireo plumbeus</i>					X
Porcupine	<i>Erethizon dorsatum</i>	X				
Prairie falcon	<i>Falco mexicanus</i>					X
Pygmy nuthatch	<i>Sitta pygmaea</i>					X
Razorback sucker	<i>Xyrauchen texanus</i>		X			
Red fox	<i>Vulpes vulpes</i>	X				
Red-tailed hawk	<i>Buteo jamaicensis</i>					X

Table E-3. Common and Scientific Names of Wildlife Species Mentioned in the Plan-EA Text and in Appendix E.

Common Name	Scientific Name	Mammal	Fish	Reptile	Amphibian	Bird
Red-winged blackbird	<i>Agelaius phoeniceus</i>					X
Ring-necked pheasant	<i>Phasianus colchicus</i>					X
Ringtail cat	<i>Bassariscus astutus</i>	X				
River otter	<i>Lontra canadensis</i>	X				
Rocky mountain bighorn sheep	<i>Ovis canadensis</i>	X				
Roundtail chub	<i>Gila robusta</i>		X			
Ruby-crowned kinglet	<i>Regulus calendula</i>					X
Sagebrush lizard	<i>Sceloporus graciosus</i>			X		
Short-eared owl	<i>Asio flammeus</i>					X
Smooth green snake	<i>Liochlorophis vernalis</i>			X		
Song sparrow	<i>Melospiza melodia</i>					X
Sora	<i>Porzana carolina</i>					X
Spotted bat	<i>Euderma maculatum</i>	X				
Spotted sandpiper	<i>Actitis macularia</i>					X
Spotted skunk	<i>Spilogale</i> sp.	X				
Spotted towhee	<i>Pipilo maculatus</i>					X
Striped skunk	<i>Mephitis mephitis</i>	X				
Tiger salamander	<i>Ambystoma tigrinum</i>				X	
Townsend's big-eared bat	<i>Corynorhinus townsendii</i>	X				
Turkey vulture	<i>Cathartes aura</i>					X
Vesper sparrow	<i>Pooecetes gramineus</i>					X
Virginia's warbler	<i>Vermivora virginiae</i>					X
Weasels	<i>Mustela</i> spp.	X				
Western grebe	<i>Aechmophorus occidentalis</i>					X
Western meadowlark	<i>Sturnella neglecta</i>					X
Western terrestrial garter snake	<i>Thamnophis elegans</i>			X		
Western wood-pewee	<i>Contopus sordidulus</i>					X
Western yellow-billed cuckoo	<i>Coccyzus americanus</i>					X
White-crowned sparrow	<i>Zonotrichia leucophrys</i>					X
White-faced ibis	<i>Plegadis chihi</i>					X
White-tailed jackrabbit	<i>Lepus townsendii</i>	X				
White-tailed prairie dog	<i>Cynomys leucurus</i>	X				
Wild turkey	<i>Meleagris gallopavo</i>					X
Williamson's sapsucker	<i>Sphyrapicus thyroideus</i>					X
Wilson's phalarope	<i>Phalaropus tricolor</i>					X
Wolverine	<i>Gulo gulo luscus</i>	X				
Woodrats	<i>Neotoma</i> spp.	X				

Table E-3. Common and Scientific Names of Wildlife Species Mentioned in the Plan-EA Text and in Appendix E.

Common Name	Scientific Name	Mammal	Fish	Reptile	Amphibian	Bird
Yellow warbler	<i>Dendroica petechia</i>					X
Yellow-bellied marmot	<i>Marmota flaviventris</i>	X				
Yellow-rumped warbler	<i>Dendroica coronata</i>					X

Supporting Information for Cultural Resources

This section contains a table of cultural surveys previously conducted in the project area (Table E-4) a table of cultural resources previously recorded in the project area (Table E-5), and a table of newly recorded cultural resources (Table E-6).

Table E-4. Previous Cultural Surveys

Subwatershed	Project Element	Survey ID	Date	Author(s)	Report Title
Uncompahgre	-	DT.AE.R2	2012	Croll, Kathleen and Jenny Engleman	Class III Cultural Resource Inventory, Delta Truck Route Bypass Project, Delta County
North Fork	-	DT.CH.NR1	1986	Birrell, Craig	Archaeological Survey of a Bridge Replacement on Delta County Road 3400, Delta County, Colorado (BRO 0018(1))
Uncompahgre	-	DT.CH.NR11	2007	Hand, O. D.	An Intensive Archaeological Resource Inventory of the Dry Creek Bridge on County Road 25 in Delta, Delta County, Colorado (CDOT # BRO C180-013)
Uncompahgre	-	DT.CH.NR3	1988	Bargielski, Monica M. and Susan T. Baugh	Archaeological Survey Along State Highway 92, Near Austin, Delta County, Colorado (CXMP 18-0092-15)
Uncompahgre	-	DT.CH.NR4	1988	Angulski, Debra	Archaeological Survey West of Read at Seeley Wash Delta County, Colorado (BRS 0092(10))
Uncompahgre	-	DT.CH.NR5	1988	Angulski, Debra	Archaeological Survey of the Gunnison River Bridge on State Highway 50, Delta County, Colorado (BRF 050-1(27))
Crawford	-	DT.CH.NR8	1995	Hand, O. D.	An Intensive Cultural Resource Survey Along State Highway 92 at Crawford Reservoir, Delta County, Colorado (CC 092A-013)
North Fork	-	DT.CH.NR9	1995	Hand, O. D.	An Intensive Archaeological Resource Inventory of the Proposed State Highway 92 Multi-Modal Trail in Hotchkiss, Delta County, Colorado (STE M640-001)
Uncompahgre	-	DT.CH.R10	2007	Hand, O. D.	An Intensive Cultural Resources Inventory State Highway 92 East of Austin, Delta County, Colorado (STA 092A-018)
North Fork	-	DT.CH.R11	2012	Wolff, Greg	An Intensive Archaeological Resource Inventory of State Highway 92 Near Stengel's Hill, Delta County, Colorado
Uncompahgre	-	DT.CH.R2	1991	Crum, Sally	Cultural Resource Survey of 12.1 Miles of U.S. Highway 50, Northwest of Delta, Delta County, Colorado (CXFR 18-0050-05) (Original and Addendum)
No GIS	-	DT.CH.R9	1984	Chocol, Barbara L. S.	State Highway 50, North of Delta, Delta County, Colorado (FR 050-1(17))
North Fork	-	DT.CM.R1	2000	Conner, Carl E. and Barbara J. Davenport	Class III Cultural Resource Inventory Report for the Proposed Bowie #2 Mine Loadout Area and Related 4200-Foot-Long Railroad Spur Corridor in Delta County, Colorado for Bowie Resources, Ltd. (GRI Project No. 2034)

Table E-4. Previous Cultural Surveys

Subwatershed	Project Element	Survey ID	Date	Author(s)	Report Title
Uncompahgre	-	DT.CPO.R1	1981	Not Specified	Four Corners Regional Commission Historical Survey of Delta, Delta County, Colorado
No GIS	-	DT.CU.R1	2007	Wheat, Joe Ben	Report of an Archaeological Survey of the Crawford Reservoir Site, Delta County, Colorado
North Fork	-	DT.E.NR3	2010	Mullen, Jaclyn	A Cultural Resources Inventory of Two Proposed Access Roads for the Juanita Substation in Delta County, Colorado (PO# 05159551, 09Call46)
Crawford	-	DT.E.R1	2005	Firor, James	Class III Cultural Resource Inventory of Access Roads and Tower Locations Along a Segment of Western Area Power Administration's Curecanti-Rifle 230 kV Transmission Line Between Structures 24-2 and 27-1, Delta County, Colorado (05UN88)
North Fork	-	DT.E.R2	2009	Mullen, Jaclyn	A Cultural Resources Inventory for the Expansion of the Hotchkiss Transmission Line Substation in Delta County, Colorado
Crawford	-	DT.FS.NR62	2004	Montero, Maricio, Dea Funka and Robert McKeever	Saddle Mountain Wild Fire, Delta County, Colorado (R2004-020408-039)
Uncompahgre	-	DT.FS.R2	1986	Hammer, E. Polly	RoUBideau Creek Bridge Cultural Resource Evaluation, Delta County, Colorado
Crawford	-	DT.FS.R33	1989	Crum, Sally M.	Cultural Resource Inventory of the Grand Mesa Campgrounds Project, Delta County, Colorado
Crawford	-	DT.FS.R4	1982	Sanders, Larry K.	Minnesota Ponds and Trails, Delta County, Colorado (I-82-08-81)
Uncompahgre	-	DT.FW.NR1	1996	Firor, James	Cultural Resource Inventory of 12 Acres in the Escalante State Wildlife Area, Delta County, Colorado
Uncompahgre	-	DT.LG.NR1	1978	Reed, Alan D.	Archaeological Clearance Survey for the City of Delta's Proposed Wastewater Treatment Plant, Delta County, Colorado
Uncompahgre	-	DT.LG.NR2	1981	Webster, Laurie D.	Archaeological Clearance Survey for the City of Delta's Proposed Wastewater Treatment Plant and Sewerline, Delta County, Colorado
Uncompahgre	-	DT.LG.R4	2012	Mueller, Jenn	A Class III Cultural Resource Inventory of Delta County's Proposed Gravel Procurement Area, Delta County, Colorado
Uncompahgre	-	DT.LM.NR102	2000	Sazama, James	Peach Valley Water Line Extension, Delta County, Colorado (OoUB/063)
Crawford	-	DT.LM.NR103	2000	Pfifer, Teresa	Short Right-of-Way for Town of Crawford for Existing J Street, Two Driveway Entrances and Water Line, Delta County, Colorado (00UB085)
North Fork	-	DT.LM.NR104	2000	Pfifer, Teresa	Dmea Right-of-Way for Buried Powerline to Adobe Hills Subdivision, Delta County, Colorado (00UB116)

Table E-4. Previous Cultural Surveys

Subwatershed	Project Element	Survey ID	Date	Author(s)	Report Title
North Fork	-	DT.LM.NR105	2000	Pfifer, Teresa	Right-of-Way for Access Road and Buried Water Pipeline for the Adobe Hills Subdivision, Delta County, Colorado (00UB113)
Uncompahgre	-	DT.LM.NR106	2000	Lazorchak, David	Fup Pig Mesa Pit Coc 63851, Delta County, Colorado (00UB095)
North Fork	-	DT.LM.NR107	2001	Lewis, Lynn	CDOT Borrow Removal to Be Used in Highway Construction and Reduce Slopes for Traffic Safety, Delta County, Colorado (01UB074)
Uncompahgre	-	DT.LM.NR11	1983	Scott, Douglas	Garnet Mesa Sale Tract II, Delta County, Colorado
Crawford	-	DT.LM.NR110	2000	Pfifer, Teresa	Right-of-Way for an Existing Ditch, Delta County, Colorado (01UB069)
Crawford	-	DT.LM.NR111	2001	Conner, Carl	Class III Cultural Resources Inventory of the Crawford Water System's Wiley Springs Development (9500'-Access Road, 6000'-Pipeline, Spring Site and Tank Location) in Delta County, Colorado
Uncompahgre	-	DT.LM.NR113	2001	Pfifer, Teresa	Rick Nelson Water Pipeline Right-of-Way, Delta County, Colorado (01UB136)
Uncompahgre	-	DT.LM.NR117	2002	Pfifer, Teresa	Right-of-Way for Minor Road Realignment to Delta County 18.25 Drive, Delta County, Colorado (02UB019)
Crawford	-	DT.LM.NR119	2001	Kubik, Kurt	Youngs Peak Woodcut (#236149), Delta County, Colorado (01UB036)
Uncompahgre	-	DT.LM.NR12	1983	Scott, Douglas	Peach Valley Sale Tract 10, Delta County, Colorado
Crawford	-	DT.LM.NR121	2002	Pfifer, Teresa	Right-of-Way for an Access Road Approximately 400 Feet Long by 80 Feet Wide, Delta County, Colorado (02UB040)
Uncompahgre	-	DT.LM.NR122	2002	Pfifer, Teresa	Right-of-Way Across Existing Trails for Access, Delta County, Colorado (02UB020)
Uncompahgre	-	DT.LM.NR127	2003	Pfifer, Teresa	Right-of-Way for Water Pipeline 1000 Feet Long by 30 Feet Wide, Delta County, Colorado (03UB31)
Uncompahgre	-	DT.LM.NR129	2002	Pfifer, Teresa	Rick Nelson Water Pipeline Right-of-Way, Delta County, Colorado (03UB23)
Crawford	-	DT.LM.NR136	2003	Stipe, Frank	3618, Road Maintenance Survey, Delta County, Colorado (03Un57)
Crawford	-	DT.LM.NR138	2003	Pfifer, Teresa	Right-of-Way to Realign Delta County Road 3900, Delta County, Colorado (02UB18)
Uncompahgre	-	DT.LM.NR140	1992	Burch, Deborah	Delta-Montrose Electric Association Amendment to Existing Line, Delta County, Colorado (92UB019)
Crawford	-	DT.LM.NR142	1992	Burch, Deborah	Delta County Telecomm, Inc. Burying Fiber Optics Cable Adjacent to Existing Cable, Delta County, Colorado (93UB002)
Crawford	-	DT.LM.NR144	1994	Pfifer, Teresa	Right-of-Way, Delta County, Colorado (95UB015)
North Fork	-	DT.LM.NR149	2004	Pfifer, Teresa	Right-of-Way for Existing Water Pipelines and Access Road, Delta County, Colorado (04UB64)

Table E-4. Previous Cultural Surveys

Subwatershed	Project Element	Survey ID	Date	Author(s)	Report Title
Crawford	-	DT.LM.NR150	2003	Pfifer, Teresa	Right-of-Way for an Access Road Approximately 850 Feet Long by 80 Feet Wide, Delta County, Colorado (04UB014)
Crawford	-	DT.LM.NR156	2004	Stipe, Frank	Cottonwood Creek Road Realignment Right-of-Way, Delta County, Colorado (05Un19)
Crawford	-	DT.LM.NR157	2005	Stipe, Frank	Bone Mesa Waterline, Delta County, Colorado (05Un22)
Crawford	-	DT.LM.NR159	2004	Pfifer, Teresa	Dmea (Delta Montrose Electric Association) Right-of-Way for Overhead Power Line, Delta County, Colorado (04UB43)
Uncompahgre	-	DT.LM.NR162	1981	Barnett, Peggy	A Cultural Resources Clearance Survey of the Selig Canal, Delta County, Colorado
Uncompahgre	-	DT.LM.NR164	2008	Hadden, Glade	Cultural Resources Inventory of the Proposed Hawkins Irrigation Pipeline (08 Un-18)
Uncompahgre	-	DT.LM.NR165	2008	Hadden, Glade	Cultural Resources Inventory of the Proposed Nelson Right-of-Way (08 Un-19)
Uncompahgre	-	DT.LM.NR170	2013	Hadden, Glade	Cultural Resource Inventory of the Proposed Delta County Road Realignments at 2100 Road and Last Chance Road
North Fork	-	DT.LM.NR19	1980	Steel, Susan	Campbell Right-of-Way (Roatcap Creek), Delta County, Colorado
No GIS	-	DT.LM.NR25	1980	Scott, Douglas	Sulphur Hill Gravel Pit, Delta County, Colorado
North Fork	-	DT.LM.NR26	1981	Steel, Sue	Gunnison Forks Fence & Cattleguard, Delta County, Colorado
Crawford	-	DT.LM.NR27	1980	Steel, Sue	Right-of-Way for Spur Off Existing Road, Delta County, Colorado
Crawford	-	DT.LM.NR28	1980	Steel, Sue	Oglesby Right-of-Way, Delta County, Colorado
Crawford	-	DT.LM.NR29	1981	Scott, Douglas	Young's Peak Communication Site Inventory, Delta County, Colorado
Crawford	-	DT.LM.NR30	1981	Scott, Douglas	Proposed Arroyo Less Water Pipeline Route, Delta County, Colorado
North Fork	-	DT.LM.NR33	1985	Douthit, Lee	Corral Clearance, Delta County, Colorado
Crawford	-	DT.LM.NR4	1985	Rupp, Frank G.	Uncompahgre Basin Sale Tract, Haflen/Littlefield Trespass, Delta County, Colorado
North Fork	-	DT.LM.NR41	1987	Frazier, Larry	Powerline Right-of-Way for Gunnison River Pleasure Park, Delta County, Colorado (UB87035)
Crawford	-	DT.LM.NR42	1988	Frazier, Larry	Rocky Mountain Natural Gas Four-Inch Pipeline Right-of-Way From Hotchkiss to Crawford, Delta County, Colorado (UB8812)
North Fork	-	DT.LM.NR43	1988	Frazier, Larry	Delta County Road Right-of-Way for Existing Road From Highway 92 to the Gunnison Forks on the Gunnison River, Delta County, Colorado (UB-88-13)
No GIS	-	DT.LM.NR48	1989	Madison, Carl W.	7.2 kV Aerial Powerline, Delta County, Colorado (UB89006)
Uncompahgre	-	DT.LM.NR62	1991	Lujan, D. Leon	Tri-County Water Pipeline Project, Delta County, Colorado (91UB044)

Table E-4. Previous Cultural Surveys

Subwatershed	Project Element	Survey ID	Date	Author(s)	Report Title
Crawford	-	DT.LM.NR67	1994	Pfifer, Teresa	Delta County Telecom, Right-of-Way Amendment, Delta County, Colorado (94UB018)
Crawford	-	DT.LM.NR71	1995	Pfifer, Teresa	Right-of-Way for Buried Water Pipelines, Delta County, Colorado (95UB044)
North Fork	-	DT.LM.NR78	1996	Pfifer, Teresa	Access Road Right-of-Way to Hackl/Crane Private Property, Delta County, Colorado (96UB028)
Crawford	-	DT.LM.NR80	1996	Lewis, Lynn	Borrow Area Along G Lane Requested by Dave Davis, Delta County, Colorado (96UB076)
Crawford	-	DT.LM.NR84	1997	Pfifer, Teresa	Crawford Mesa Water Association, Construction of a Water Tank, Delta County, Colorado (97UB051)
Crawford	-	DT.LM.NR87	1997	Hurshman, Tom	Crawford Mesa Water Association Proposed Water Tank Site on Cottonwood Creek, Delta County, Colorado (98UB003)
Uncompahgre	-	DT.LM.NR88	1998	Pfifer, Teresa	Tri County Water Pipeline Installation, Delta County, Colorado (98UB018)
Uncompahgre	-	DT.LM.NR96	1999	Pfifer, Teresa	Nungate Family Grant Row Across an Existing Road for Legal Access to 40 Acre Parcel for Single Family Residence, Delta County, Colorado (99UB089)
Crawford	-	DT.LM.NR97	1999	Sazama, James	Mcdonald Reservoir Cleanout, Delta County, Colorado (99UB079)
North Fork	-	DT.LM.R13	1991	Lujan, D. Leon	Delta County Telephone Buried Cable Right-of-Way, Delta County, Colorado (91UB025)
North Fork	-	DT.LM.R20	1995	Conner, Carl E.	Cultural Resource Inventory Report for the Proposed Bowie #2 Mine, Delta County, Colorado
Uncompahgre	-	DT.LM.R31	1981	Reed, Alan D.	Cultural Resource Inventory of Planned Auger and Diamond Hole Locations for the Tri-County Hydroelectric Project, Delta County, Colorado
Crawford	-	DT.LM.R50	2005	Walker, Patricia and Robert Dello-Russo	Class III Cultural Resources Inventory for the Crawford Hazardous Fuels Reduction Treatment BLM - San Juan PUBLIC Lands Center and Uncompahgre Field Office Delta County, Colorado (04Un081)
Crawford	-	DT.LM.R54	1980	Steel, Sue	Crawford Woodcutting Area, Delta County, Colorado
North Fork	-	DT.LM.R56	2007	Arrington, Kristie	Class III Cultural Resource Inventory of Paonia Hazardous Fuels Reduction Area, Delta County, Colorado (BLM # 06Un057)
No GIS	-	DT.LM.R61	1977	Baker, Steven G.	A Cultural Resource Survey for the Orchard Valley Mine, Colorado Westmoreland, Inc., Paonia, Delta County, Colorado
North Fork	-	DT.LM.R62	1981	Harrison, Cheryl	Pitkin Reservoir and Aqueduct, Delta County, Colorado
No GIS	-	DT.LM.R65	1984	Baker, Steven G.	Final Cultural Resource Study of the 1984 Revised Permit Area and Adjacent Vicinities of Colorado Westmoreland, Inc.'s Orchard Valley Mine, Delta County, Co (Volumes 1 and 2)

Uncompahgre	-	5OR2100	Isolated Find - Debitage	Archaeological	Field Not Eligible	2011
Uncompahgre	-	5OR2133	Middleton Ranch (Centennial Farm)	Historical Archaeology	Centennial Farm	2013

Table E-6. Newly Recorded Cultural Resources

Subwatershed	Project Element	Site Number	Site Name / Description	Resource Type	NRHP Eligibility	Assessment Date
Bostwick Park	SCADA Cimarron Canal Diversion	5GN6371.1	Cimarron Canal	Historical Archaeology, Historic	Needs Data, Supporting	2017
Bostwick Park	West Lateral	5MN10895.1	West Lateral	Historical Archaeology, Historic	Needs Data, Supporting	2017
Bostwick Park	West Lateral	5MN10896.1	Bostwick Park Road	Historical Archaeology, Historic	Needs Data, Supporting	2017
Crawford	Grandview 1, Grandview 2, Grandview-Aspen SCADA	5DT1780.6	Grand View Ditch	Historical Archaeology, Historic	Needs Data, Supporting	2017
Crawford	SCADA Smith Fork Feeder	5DT2093.1	Smith Fork Feeder Canal	Historical Archaeology, Historic	Needs Data, Supporting	2017
Crawford	Upper Needle Rock Ditch Improvement, SCADA Needle Rock	5DT2094.1	Needle Rock Ditch	Historical Archaeology, Historic	Needs Data, Supporting	2017
Crawford	Grandview 1, Grandview 2	5DT2095.1	Fruitland Mesa Road	Historical Archaeology, Historic	Needs Data, Supporting	2017
Crawford	Grandview 1	5DT2096	Historic Barn	Historic	Needs Data	2017
North Fork	SCADA Patterson Lateral	5DT1277.7	Fire Mountain Canal	Historical Archaeology, Historic	Needs Data, Supporting	2017
North Fork	SCADA Siphon Inlet	5DT1277.8	Fire Mountain Canal	Historical Archaeology, Historic	Needs Data, Supporting	2017
North Fork	SCADA Patterson Lateral	5DT1959.2	Patterson Lateral	Historical Archaeology, Historic	Officially Eligible, Non-supporting	2017
North Fork	SCADA Leroux Creek Feeder	5DT2005.4	Leroux Creek Ditch	Historical Archaeology, Historic	Needs Data, Supporting	2017
Uncompahgre	SCADA Selig Canal	5MN1854.5	Selig Canal	Historical Archaeology, Historic	Officially Eligible, Supporting	2017
Uncompahgre	SCADA East Canal	5MN1856.2	East Canal	Historical Archaeology, Historic	Officially Eligible, Supporting	2017
Uncompahgre	SCADA Loutsenhizer	5MN2035.3	Loutsenhizer Canal	Historical Archaeology, Historic	Officially Eligible, Supporting	2017
