

CONSERVATION ENHANCEMENT ACTIVITY

E590119X-Colorado

CONSERVATION STEWARDSHIP PROGRAM

Reduce risks of nutrient losses to ground water by utilizing precision agriculture technologies to plan and apply nutrients.

Conservation Practice 590: Nutrient Management

APPLICABLE LAND USE: Crop (annual & mixed); Crop (perennial)

RESOURCE CONCERN ADDRESSED: Water Quality Degradation

ENHANCEMENT LIFE SPAN: 1 Year

Enhancement Description

Utilize precision application technology and techniques to reduce risk of nutrients in ground water by reducing total amount of applied nutrients and reducing the potential for delivery of nutrients into ground water. Precision agriculture technology is utilized to plan and apply nutrients to improve nutrient use efficiency and reduce risk of nutrient losses.

Criteria

- Documentation of producer’s record of nutrient management meeting all NRCS Conservation Practice Standard Nutrient Management (CPS 590) general criteria and additional criteria to minimize agricultural non-point source pollution of surface and groundwater. (Includes running N and P Index.)
- Minimize soil surface disturbance during fertilizer placement.
- Development of site-specific yield maps using soils data, current soil test results, and a yield monitoring system with GPS receiver to correlate field location with yield. Data is used to diagnose low, medium, and high productivity areas (management zones).

CONSERVATION STEWARDSHIP PROGRAM

- Nutrient rates of application (minimum N-P-K) are planned and applied according to management zone.
- Utilize variable rate technology for nutrient application to reduce nutrient loss risk and improve nutrient use efficiency; variable rate technology may be map-based, sensor-based (crop canopy sensors), or manual.

Additional Information for Colorado:

This enhancement requires a current soil test

In addition to the National Criteria, for a Precision Nutrient Management Plan to be an effective tool, the following, as a minimum must be completed:

- Design a nutrient budget that considers all sources of nutrients available for crop production such as animal manures, organic by-products, mineralization, waste water, irrigation water, and legumes.
- Identify within field variability and delineate corresponding management zones.
- Determine realistic yield goals for each management unit and zone.
- Compare performance of nutrient rates, timing, placement, and alternatives to nutrient application (cover crops).
- Determine causes of yield losses due to natural, human induced, or equipment factors.
- Identify nutrient sufficiency, deficiency, and toxicity areas.
- Determine any other productivity problems and soil amendment options.

Refer to Agronomy Technical Note No. 3: Precision Nutrient Management Planning for additional guidance on Precision Nutrient Management Planning

CONSERVATION STEWARDSHIP PROGRAM

Documentation and Implementation Requirements

Participant will:

- Prior to implementation, provide documentation for review by NRCS showing a record of implementing nutrient management meeting all NRCS Conservation Practice Standard Nutrient Management (CPS 590) general criteria and additional criteria to minimize agricultural nonpoint source pollution of surface and groundwater.
- Prior to implementation, develop site-specific yield maps and use them to develop management zones within the field.
- Prior to implementation, develop and document a planned nutrient budget, yield goal, and applications by management zone (pounds/acre active ingredient nutrients, must include at a minimum N-P-K). Develop planned variable and flat rate application layers (maps and/or tabular statistics).
- During implementation, utilize variable rate technology. Variable rate technology may be map-based, sensor-based (crop canopy sensors), or manual.
- During implementation, keep records to document as applied records of actual variable rate applications (maps and/or tabular statistics).
- During implementation, minimize soil surface disturbance during fertilizer placement.
- During implementation, notify NRCS of any planned changes to verify the planned system meets the enhancement criteria.
- After implementation, make documentation and records available for review by NRCS to verify implementation of the enhancement.

NRCS will:

- As needed, provide technical assistance to meet the criteria of the enhancement.
- Prior to implementation, provide and explain NRCS Conservation Practice Standard Nutrient Management (CPS 590) as it relates to implementing this enhancement.

CONSERVATION STEWARDSHIP PROGRAM

- Prior to implementation, review documentation to verify a record of implementing nutrient management meeting all NRCS Conservation Practice Standard Nutrient Management (CPS 590) general criteria and additional criteria to minimize agricultural nonpoint source pollution of surface and groundwater.
- Prior to implementation, verify the development of site-specific yield maps used to develop management zones within the field.
- Prior to implementation, verify the development of a planned nutrient budget, yield goal, and planned nutrient applications by management zone.
- During implementation, evaluate any planned changes to verify the planned system meets the enhancement criteria.
- After implementation, review documentation and records to verify implementation of the enhancement.

NRCS Documentation Review:

I have reviewed all required participant documentation and have determined the participant has implemented the enhancement and met all criteria and requirements.
