

CONSERVATION ENHANCEMENT ACTIVITY

E595116X- Colorado

**CONSERVATION
STEWARDSHIP
PROGRAM**

Reduce risk of pesticides in surface water by utilizing precision pesticide application techniques

Conservation Practice 595: Integrated Pest Management

APPLICABLE LAND USE: Crop (annual & mixed); Crop (perennial)

RESOURCE CONCERN ADDRESSED: Water Quality Degradation

ENHANCEMENT LIFE SPAN: 1 year

Enhancement Description

Utilize precision application techniques to reduce risk of pesticides in surface water by reducing total amount of chemical applied and reducing the potential for delivery of chemicals into water bodies.

Criteria

- Documentation of producer’s record of integrated pest management meeting all Conservation Practice Standard Integrated Pest Management (CPS 595) general criteria related to reducing the risk of solution and adsorbed runoff.
- Use of GPS is required to document application and site-specific compliance with all label requirements for controlling non-target application as well as mapping specific pest infestation locations.
- Utilize one or more of the following techniques to reduce the total amount of chemical applied and reduce the potential for delivery of chemicals into water bodies:
 - Precision guidance system which reduces ground or aerial spray overlap to less than 12 inches

- Variable rate technology (VRT) which allows rate of pesticide application to dynamically change for site specific applications
- “Smart sprayer” technology which utilizes automatic sensors and computer controlled nozzles to turn individual nozzles on and off

CONSERVATION STEWARDSHIP PROGRAM

CONSERVATION STEWARDSHIP PROGRAM

Documentation and Implementation Requirements

Participant will:

- Prior to implementation, provide documentation of implementation of integrated pest management meeting all Conservation Practice Standard Integrated Pest Management (CPS 595) general criteria and additional criteria to prevent or mitigate off-site pesticide risks to water quality from leaching, solution runoff, and adsorbed runoff losses.
- During implementation, keep records of applications using the selected technology with maps and/or tabular data.
- After implementation, make the following items available for review by NRCS to verify implementation of the enhancement:
 - As applied records of actual applications using the selected technology (maps and/or tabular statistics).

NRCS will:

- Prior to implementation, provide and explain NRCS Conservation Practice Standard Integrated Pest Management (CPS 595) as it relates to implementing this enhancement.
- As needed, provide technical additional assistance to the participant as requested.
- After implementation, verify implementation of the enhancement, by reviewing records created during enhancement implementation.

Colorado Documentation Requirements

- a) Plan map showing sensitive areas and a soils map
- b) A list of prevention and avoidance strategies that are being used or will be implemented, refer to CPS 595 and a monitoring plan including pests identified and the economic threshold levels for each pest, if applicable.
- c) Environmental Risk Assessment of planned suppression techniques (USDA-NRCS Win-PST soil/pesticide interaction report), including the 595 IR mitigation spreadsheet to reduce environmental risk (minimum level of mitigation is based on WIN-PST soil/pesticide interaction rating hazard).

NRCS Documentation Review:

I have reviewed all required participant documentation and have determined the participant has implemented the enhancement and met all criteria and requirements.

Participant Name _____ Contract Number _____

Total Acres Applied _____ Fiscal Year Completed _____

NRCS Technical Adequacy Signature _____ Date _____

USDA is an equal opportunity employer, provider and lender.
