¹ May include light disking or strip disking depending upon the CRP practice

² Flash grazing must be scheduled and performed according to a prescribed grazing plan developed by NRCS

³ Haying must be scheduled and performed according to a harvest management plan developed by NRCS

⁴ Applies only to areas devoted to grass/forbs

⁵ Forest thinning must be planned and developed by a KDF Forester with input from a KDFWR biologist. The participant is responsible for setting up a site visit to develop the plan.

* Management for CP-33 is **not required** when planned adjacent to a sensitive area such as a seasonal/perennial stream, agricultural ditch, wetland, or open-throated sinkhole. If requested, plan in close association with NRCS/Farm Bill biologist.
