Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E314A	PLANTS; ANIMALS	Plant Structure and Composition, Plant Pest Pressure; Terrestrial Habitat for Wildlife and Invertebrates			X	X	X		Brush management to improve wildlife habitat	Brush management is employed to create a desired plant community, consistent with the related ecological site steady state, which will maintain or enhance the wildlife habitat desired for the identified wildlife species. It will be designed to provide plant structure, density and diversity needed to meet those habitat objectives. This enhancement does not apply to removal of woody vegetation by prescribed fire or removal of woody vegetation to facilitate a land use change.	acre	1	3	State WHEG for species of concern	NA	Enhancement lifespan changed to one year, max years for contracting changed to 3
E315A	PLANTS	Plant Productivity and Health, Plant Structure and Composition, Plant Pest Pressure			X	X	X		Herbaceous weed treatment to create desired plant communities consistent with the ecological site	Mechanical, chemical, or biological, herbaceous weed treatment will be used to control targeted, herbaceous weeds to create, release, or restore desired plant communities that are consistent with achievable, ecological site, steady state descriptions.	acre	1	3	Reproduction and other life-cycle requirements of target recorded wildlife and pollinator species	NA	Enhancement lifespan changed to one year, max years for contracting changed to 3
E327A	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X		X	X	X	Conservation cover for pollinators and beneficial insects	Seed or plug nectar and pollen producing plants in non-cropped areas such as field borders, vegetative barriers, contour buffer strips, grassed waterways, shelterbelts, hedgerows, windbreaks, conservation cover, and riparian forest and herbaceous buffers.	acre	5	1	List of plants suitable for pollinator and beneficial insect habitat which emphasizes as many native species as practical.	NA	
E327B	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X			X	X	Establish Monarch butterfly habitat	Seed or plug milkweed (<i>Asclepias</i> spp.), and high-value monarch butterfly nectar plants on marginal cropland, field borders, contour buffer strips, and similar areas.	acre	5	1	Lists of larval host plants and nectar plants suitable for Monarch butterfly. WHEG for species of concern - Monarch butterfly.	NA	
E328A	SOIL; PLANTS	Sheet and Rill Erosion; Wind Erosion; Organic Matter Depletion; Compaction; Plant Pest Pressure; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Resource conserving crop rotation	Establish a Resource Conserving Crop Rotation. Rotation must include AT LEAST one resource conserving crop as determined by the State Conservationist in a minimum three year crop rotation. The crop rotation will reduce soil erosion (water and wind), improve soil health, improve soil moisture efficiency, and reduce plant pest pressures.	acre	1	5	List of resource conserving crops.	NA	
E328B	PLANTS	Sheet and Rill Erosion; Wind Erosion; Organic Matter Depletion; Compaction; Plant Pest Pressure; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Improved resource conserving crop rotation	Improve an existing Resource Conserving Crop Rotation. Must enrich an existing rotation which already includes AT LEAST one resource conserving crop as determined by the State Conservationist in a minimum three year crop rotation. The crop rotation will reduce soil erosion (water and wind), improve soil health, improve soil moisture efficiency, and reduce plant pest pressures.	acre	1	5	List of resource conserving crops.	NA

Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E328C	SOIL	Sheet and Rill Erosion, Wind Erosion	X						Conservation crop rotation on recently converted CRP grass/legume cover	Implement a crop rotation management system on crop land acres that have recently converted from CRP grass/legume conservation cover to annual planted crops. Crop rotation minimizes disturbance resulting in a Soil Tillage Intensity Rating (STIR) less than 10 and reduces soil erosion from water and wind to below soil tolerance (T) level. The current NRCS wind and water erosion prediction technologies must be used to document the rotation, soil erosion estimate, and STIR calculations. *This enhancement is limited to acres where the conversion event took place not more than 2 years prior. Enhancement not applicable on hayland.	acre	1	5		NA	
E328D	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X						Leave standing grain crops unharvested to benefit wildlife	Implement a crop rotation which allows a portion of grain crops to be left in fields un-harvested to provide food and cover for wildlife during winter months.	acre	1	5	List of crops that provide food, cover, and shelter for targeted wildlife species. WHEG for species of concern.	NA	
E328E	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Soil health crop rotation	Implement a crop rotation which addresses all four principle components of soil health: increases diversity of the cropping system; maintains residue throughout the year; keeps a living root; and minimizes soil chemical, physical and biological disturbance. The rotation will include at least 4 different crop and/or cover crop types (crop types include cool season grass, warm season grass, cool season broadleaf, warm season broadleaf) grown in a sequence that will produce a positive trend in the Organic Matter (OM) sub factor value over the life of the rotation, as determined by the Soil Conditioning Index (SCI). The current NRCS wind and water erosion prediction technologies must be used to document the rotation and SCI calculations.	acre	1	5	List of high residue crops. State guidance of options to maximize living root systems in local climate and cropping systems. Determine available growing days and period of no growth, such as frozen periods in the north.	NA	
E328F	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Modifications to improve soil health and increase soil organic matter	Use of soil health assessment to evaluate impact of current conservation crop rotation in addressing soil organic matter depletion (primary assessment made in Year 1). Modifications to the crop rotation and/or crop management will be made as a result of the assessment results (adding a new crop and/or cover crop to the rotation; making changes to planting and/or tillage system, harvest timing of crops, or termination timing of cover crops). During Year 3 a follow up assessment will be completed to allow time for the modifications to show increased soil organic matter. Modified system must produce a positive trend in the Organic Matter (OM) sub factor value over the life of the rotation, as determined by the Soil Conditioning Index (SCI). The current NRCS wind and water erosion prediction technologies must be used to document the rotation and SCI calculations.	acre	1	5		NA

Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E328G	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Crop rotation on recently converted CRP grass/legume cover for soil organic matter improvement	Crop rotation on acres converted, no more than 2 years prior, from CRP grass/legume cover to annual crops. Diverse rotation with living roots and residue cover throughout year and minimal disturbance. Enhancement not applicable on hayland.	acre	1	5	List of high residue crops. State guidance of options to maximize living root systems in local climate and cropping systems. Determine available growing days and period of no growth, such as frozen periods in the north.	NA	
E328I	WATER	Nutrients Transported to Surface Water	X	X					Forage harvest to reduce water quality impacts by utilization of excess soil nutrients	Establish a forage crop (single species or mix) following a primary annual crop to take up excess soil nutrients. Select forage known to effectively utilize and scavenge nutrients. Forage shall be harvested for forage, but not be grazed or burned.	acre	1	1	List of forage crops known to effectively utilize and scavenge nutrients. State guidance of options to maximize nutrient uptake in local climate and cropping systems.	NA	
E328J	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X						Improved crop rotation to provide benefits to pollinators	Improve the existing crop rotation by adding pollinator friendly crops into the rotation. The crop rotation shall include a minimum of three different crops in a minimum five year crop rotation. Each year, the pollinator friendly crop will be planted on a minimum of 5% of cropland acres contained within the agricultural operation. Use of insecticides is limited for the pollinator friendly crop.	acre	1	5	State list of pollinator friendly crops.	NA	
E329A	SOIL	Sheet and Rill Erosion; Wind Erosion	X						No till to reduce soil erosion	Establish no till system to reduce sheet and rill and wind erosion soil loss. Field(s) must have a soil loss at or below the soil tolerance (T) level for water and wind erosion for the crop rotation and a Soil Tillage Intensity Rating (STIR) of no greater than 10 for each crop in the planned rotation. The current NRCS wind and water erosion prediction technologies must be used to calculate soil loss and STIR.	acre	1	5		NA	
E329B	AIR	Emissions of Particulate Matter (PM) and PM Precursors	X						No till to reduce tillage induced particulate matter	Establish no till system to reduce tillage induced particulate matter. Field(s) must have a soil loss at or below the soil tolerance (T) level for the crop rotation and a Soil Tillage Intensity Rating (STIR) of no greater than 10 for each crop in the planned rotation. The current NRCS wind and water erosion prediction technologies must be used to document soil loss and STIR calculations.	acre	1	5		NA	
E329C	WATER	Inefficient Irrigation Water Use; Naturally Available Moisture Use	X						No till to increase plant-available moisture	Establish a no till system to increase plant-available moisture. Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 20. The current NRCS wind and water erosion prediction technologies must be used to document STIR calculations. Maintain a minimum 60 percent surface residue cover throughout the year to reduce evaporation from the soil surface.	acre	1	5		NA

Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E329D	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						No till system to increase soil health and soil organic matter content	Establish a no till system to increase soil health and soil organic matter content. Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 20. The crop rotation must achieve a soil conditioning index (SCI) of zero or higher. The current NRCS wind and water erosion prediction technologies must be used to document STIR and SCI calculations. Residue shall not be burned, grazed, or harvested.	acre	1	5		NA	
E329E	ENERGY	Energy Efficiency of Farming/Ranching Practices and Field Operations	X						No till to reduce energy	Establish a no till system which reduces total energy consumption associated with field operations by at least 25% compared to current tillage system (benchmark). Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 20. The current NRCS wind and water erosion prediction technologies must be used to document STIR calculations and energy consumption.	acre	1	5		NA	
E340A	SOIL	Sheet and Rill Erosion; Wind Erosion	X	X					Cover crop to reduce soil erosion	Cover crop added to current crop rotation to reduce soil erosion from water and wind to below soil tolerance (T) level. Cover crops grown during critical erosion period(s). Species are selected that will have physical characteristics to provide adequate erosion protection.	acre	1	5	List of approved cover crop species for water or wind erosion protection. Guidance document on local climates and cropping systems.	NA	
E340B	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Intensive cover cropping to increase soil health and soil organic matter content	Implementation of cover crop mix to provide soil coverage during ALL non-crop production periods in an annual crop rotation. Cover crop shall not be harvested or burned. Planned crop rotation including cover crops and associated management activities must achieve a soil conditioning index (SCI) of zero or higher. The current NRCS wind and water erosion prediction technologies must be used to document SCI calculations.	acre	1	5	List of approved cover crop species. Guidance document on local climates and cropping systems.	NA	
E340C	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X	X					Use of multi-species cover crops to improve soil health and increase soil organic matter	Implement a multi-species cover crop to add diversity and increase biomass production to improve soil health and increase soil organic matter. Cover crop mix must include a minimum of 4 different species. The cover crop mix will increase diversity of the crop rotation by including crop types currently missing, e.g. Cool Season Grass (CSG), Cool Season Broadleaves (CSB), Warm Season Grasses (WSG), Warm Season Broadleaves (WSB).	acre	1	5	List of approved cover crop species. Guidance document on local climates and cropping systems.	NA	
E340D	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability		X					Intensive orchard/vineyard floor cover cropping to increase soil health	Implement orchard or vineyard floor cover crops. Cover crop shall not be harvested, grazed, or burned. Must achieve a soil conditioning index of zero or higher and produce a positive trend in the Organic Matter subfactor over the life of the rotation.	acre	1	5	List of approved cover crop species. Guidance document on local climates and cropping systems.	NA	
E340E	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Use of soil health assessment to assist with development of cover crop mix to improve soil health	Soil health assessment (year 1) to evaluate current crop rotation in addressing soil organic matter depletion. Results are utilized to select a multi-species cover crop mix to add to the current crop rotation. Follow up assessment completed (year 3).	acre	1	5	List of approved cover crop species. Guidance document on local climates and cropping systems.	NA

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E340F	SOIL	Compaction	X	X					Cover crop to minimize soil compaction	Establish a cover crop mix that includes plants with both fibrous root and deep rooted systems. Fibrous to treat and prevent both near surface (0-4") and deep (>4") soil compaction and deep rooted to break up deep compacted soils. Cover crop shall not be harvested, grazed, or burned.	acre	1	5	List of approved cover crop species for soil compaction reduction. Guidance document on local climates and cropping systems.	NA	
E340G	WATER	Nutrients Transported to Surface Water; Nutrients Transported to Groundwater	X	X					Cover crop to reduce water quality degradation by utilizing excess soil nutrients	Establish a cover crop mix to take up excess soil nutrients. Select cover crop species for their ability to effectively utilize nutrients. Terminate the cover crop as late as practical to maximize plant biomass production and nutrient uptake. Cover crop shall not be harvested, grazed, or burned.	acre	1	5	List of approved cover crop species for excess nutrient uptake. Guidance document on local climates and cropping systems.	NA	
E340H	PLANT	Plant Pest Pressure	X	X					Cover crop to suppress excessive weed pressures and break pest cycles	Establish a cover crop mix to suppress excessive weed pressures and break pest cycles. Select cover crop species for their life cycles, growth habits, and other biological, chemical and/or physical characteristics. Select cover crop species that do not harbor pests or diseases of subsequent crops in the rotation. Cover crop shall not be harvested, grazed, or burned.	acre	1	5	List of approved cover crop species for weed suppression and that do not harbor pests or diseases. Guidance document on local climates and cropping systems.	NA	
E345A	SOIL	Sheet and Rill Erosion; Wind Erosion	X						Reduced tillage to reduce soil erosion	Establish a reduced tillage system to reduce soil loss. Field(s) must have a soil loss at or below the soil tolerance (T) level for water and wind erosion for the crop rotation and a Soil Tillage Intensity Rating (STIR) of no greater than 40 for each crop in the planned rotation. The current NRCS wind and water erosion prediction technologies must be used to calculate soil loss and STIR.	acre	1	5		NA	
E345B	AIR	Emissions of Particulate Matter (PM) and PM Precursors	X						Reduced tillage to reduce tillage induced particulate matter	Establish a reduced tillage system to reduce tillage induced particulate matter. Field(s) must have a soil loss at or below the soil tolerance (T) level for the crop rotation and a Soil Tillage Intensity Rating (STIR) of no greater than 40 for each crop in the planned rotation. The current NRCS wind and water erosion prediction technologies must be used to document soil loss and STIR calculations.	acre	1	5		NA

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E345C	WATER	Inefficient Irrigation Water Use; Naturally Available Moisture Use	X						Reduced tillage to increase plant-available moisture	Establish a reduced till system to increase plant-available moisture. Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 80. The current NRCS wind and water erosion prediction technologies must be used to document STIR calculations. Maintain a minimum 60 percent surface residue cover throughout the year to reduce evaporation from the soil surface.	acre	1	5		NA	
E345D	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Reduced tillage to increase soil health and soil organic matter content	Establish a reduced till system to increase soil health and soil organic matter content. Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 80. The crop rotation must achieve a soil conditioning index (SCI) of zero or higher and produce a positive trend in the Organic Matter (OM) subfactor over the life of the crop rotation. The current NRCS wind and water erosion prediction technologies must be used to document STIR and SCI calculations. Residue shall not be burned, grazed, or harvested.	acre	1	5		NA	
E345E	ENERGY	Energy Efficiency of Farming/Ranching Practices and Field Operations	X						Reduced tillage to reduce energy use	Establish a reduced tillage system which reduces total energy consumption associated with field operations by at least 25% compared to conventional tillage systems (benchmark). Each crop in the crop rotation shall have a Soil Tillage Intensity Rating (STIR) of no greater than 80. The current NRCS wind and water erosion prediction technologies must be used to document STIR calculations and energy consumption.	acre	1	5		NA	
E374A	ENERGY	Energy Efficiency of Farming/Ranching Practices and Field Operations	X	X	X		X	X	Install variable frequency drive(s) on pump(s)	Install Variable Frequency Drive(s) (VFD) on Pumping Plant (Conservation Practice Standard CPS 533) with the correct sensors, on all pumps indicated in the energy audit.	no	10	1		NA	
E374B	ENERGY	Energy Efficiency of Farming/Ranching Practices and Field Operations	X	X	X		X	X	Switch fuel source for pump motor(s)	Switch the fuel source for the pump motor(s) indicated in the energy audit to a renewable source (wind, solar, geothermal, etc.). (CPS 533 Pumping Plant)	no	10	1		NA	
E382A	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates			X	X	X		Incorporating "wildlife friendly" fencing for connectivity of wildlife food resources	Retrofitting or constructing fences that provide a means to control movement of animals, people, and vehicles, but minimizes wildlife movement impacts.	ft	20	1	State job sheet to record animal species of concern and wildlife movement modifications/specifications. WHEG for species of concern.	NA	
E386A	SOIL	Sheet and Rill Erosion; Wind Erosion	X	X			X		Enhanced field borders to reduce soil erosion along the edge(s) of a field	Enhance existing field borders to a width of at least 30 feet and establish a single species or mixture of species that provide a dense ground cover along the edge(s) of the field.	acre	10	1		NA	
E386B	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X	X			X		Enhanced field borders to increase carbon storage along the edge(s) of the field	Enhance existing field borders to a width of at least 30 feet and establish a single species or mixture of species that provide a dense ground cover and dense rooting system along the edge(s) of the field.	acre	10	1		NA	
E386D	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X			X		Enhanced field borders to increase food for pollinators along the edge(s) of a field	Enhance existing field borders to a width of at least 40 feet and establish a mixture of species that provide food for pollinators along the edge(s) of the field.	acre	10	1	List of plants suitable for pollinator habitat which emphasize as many native species as practical. WHEG for species of concern.	NA

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E386E	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X			X		Enhanced field borders to increase wildlife food and habitat along the edge(s) of a field	Enhance existing field borders to a width of at least 40 feet and establish a mixture of species that provide wildlife food and habitat along the edge(s) of the field. The extended field border will also provide enhanced wildlife habitat continuity.	acre	10	1	List of wildlife friendly grasses, forbs, shrubs, and trees. WHEG for species of concern.	NA	
E390A	WATER	Nutrients Transported to Surface Water; Sediment Transported to Surface Water	X	X					Increase riparian herbaceous cover width for sediment and nutrient reduction	Where an existing herbaceous riparian buffer is located along a river, stream, pond, lake, or other waterbody, increase the width of the buffer in order to allow a greater percentage of sediment and nutrient removal from surface and subsurface flows.	acre	5	1	List of plant species with stiff stems and high stem density that are adapted to the duration of saturation and inundation of the site.	NA	
E390B	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X		X	X	Increase riparian herbaceous cover width to enhance wildlife habitat	Where an existing herbaceous riparian buffer is located along a river, stream, pond, lake, or other waterbody, increase the diversity of native species, control invasive species, install fencing and relocate equipment operations, trails, and livestock, and increase the width of the buffer.	acre	5	1	List of wildlife friendly grasses, forbs, and legumes. WHEG for species of concern.	NA	
E391A	WATER	Nutrients Transported to Surface Water; Sediment Transported to Surface Water	X	X					Increase riparian forest buffer width for sediment and nutrient reduction	Where an existing forested riparian area is located along a river, stream, pond, lake, or other waterbody, increase the width of the buffer in order to allow a greater percentage of sediment and nutrient removal from surface and subsurface flows.	acre	15	1	List of wildlife friendly grasses, forbs, shrubs, and trees.	NA	
E391B	WATER	Elevated Water Temperature	X	X	X	X	X	X	Increase stream shading for stream temperature reduction	Riparian area tree canopy cover density is increased and the extent of the forested riparian area is increased to provide greater stream shading.	acre	15	1	List of wildlife friendly grasses, forbs, shrubs, and trees.	NA	
E391C	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X		X	X	Increase riparian forest buffer width to enhance wildlife habitat	Where an existing riparian forest buffer is located along a river, stream, pond, lake, or other waterbody, increase the diversity of native species, control invasive species, install fencing and relocate equipment operations, trails, and livestock to increase the functional width of the buffer.	acre	15	1	List of wildlife friendly grasses, forbs, shrubs, and trees. WHEG for species of concern.	NA	
E399A	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X	X	X	X	Fishpond management for native aquatic and terrestrial species	Pond rehabilitation, buffer, and watershed management actions are taken to improve habitat for native species of fish, amphibians, and shorebirds.	acre	1	5		NA	
E449A	WATER; ENERGY	Inefficient Irrigation Water Use; Energy Efficiency of Farming/Ranching Practices and Field Operations	X	X	X		X	X	Complete pumping plant evaluation for water savings	Evaluation of all pumping plants to determine the potential to rehabilitate/replace/reconfigure pump performance to improve water delivery efficiency 10% or more. Evaluate to determine if a Variable Frequency Drive motor controller(s) is recommended and the simple payback in terms of energy savings is less than 10 years.	acre	1	1		NA	
E449C	WATER	Inefficient Irrigation Water Use	X	X	X				Advanced Automated IWM – Year 2-5, soil moisture monitoring	Advanced automated irrigation water management using soil moisture or water level monitoring (installed as per IWM plan) with data loggers.	acre	1	5		NA	
E449D	WATER	Inefficient Irrigation Water Use	X	X	X				Advanced Automated IWM – Year 1, Equipment and soil moisture or water level monitoring	Installing and monitoring soil moisture or water leveling equipment for advanced automated irrigation water management	acre	1	1		NA

E472A	WATER	Nutrients transported to surface water, Pathogens and chemicals from manure, bio-solids or compost applications transported to surface water	X	X	X	X	X	X	Manage livestock access to waterbodies to reduce nutrients or pathogens to surface water	Installation of structures and implementation of grazing management actions that restrict livestock access to waterbodies in order to reduce nutrient loading or reduce the introduction of pathogens from manure, bio-solids or compost to surface waters.	ft.	10	1		NA	
E484A	SOIL	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability	X						Mulching to improve soil health	Implement a crop rotation which utilizes mulch and addresses all four principle components of soil health: increases diversity of the cropping system; maintains residue throughout the year; keeps a living root; and minimizes soil chemical, physical and biological disturbance. Plant-based mulching materials will be applied at least once during the rotation. The rotation will include at least 4 different crops and/or cover crops grown in a sequence that will produce a positive trend in the Organic Matter (OM) subfactor value over the life of the rotation, as determined by the Soil Conditioning Index (SCI). The current NRCS wind and water erosion prediction technologies must be used to document the rotation and SCI calculations.	acre	1	5	List of mulching materials with a carbon to nitrogen ratio (C:N) less than 30:1.	NA	
E511A	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X				Harvest of crops (hay or small grains) using measures that allow desired species to flush or escape	Harvest of crops (hay or small grains) using conservation measures that allow desired species to flush or escape. (For species list see State Wildlife Action Plan for species list) Conservation measures include timing of harvest, idling land during the nesting or fawning period, and applying harvest techniques that reduce mortality to wildlife.	acre	1	5	List of wildlife species of concern. State Cooperative Extension Service (CES) recommendations for forage harvest based on stage of maturity, moisture content, length of cut, stubble height and harvest interval. Primary nesting seasons for upland species. WHEG for species of interest.	NA	Added land uses pasture and range

Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E528K	SOIL	Compaction			X				Improved grazing management for soil compaction on pasture through monitoring activities	Manage the harvest of vegetation with grazing and/or browsing animals as adjusted when following recommendations of a qualifying professional, as detailed in the enhancement criteria, generated through pasture condition scoring (PCS).	acre	1	5	Pasture Condition score assessments. Critical periods of plant needs (such as post-planting or renovation, severe drought, etc.).	NA	
E528L	SOIL	Bank erosion from streams, shorelines or water conveyance channels			X	X			Prescribed grazing that improves or maintains riparian and watershed function erosion	Grazing management employed will provide cover and density needed in the watershed in order to reduce runoff, improve infiltration, provide for above ground water filtration and sustain applicable fish and wildlife species habitat.	acre	1	5		NA	
E528M	SOIL	Classic Gully Erosion			X				Grazing management that protects sensitive areas from gully erosion	Grazing management employed will provide vegetative cover and density needed in the watershed in order to protect sensitive areas such as sinkholes, streams, highly erodible areas, or locations that cannot tolerate plant defoliation.	acre	1	5		NA	
E528P	SOIL, WATER	Pathogens and chemicals from manure, bio-solids or compost applications transported to surface water, Nutrients transported to surface water, Organic Matter Depletion	X	X	X				Implementing Bale or Swath Grazing to increase organic matter and reduce nutrients in surface water	Improve organic matter, aggregate stability and soil organism habitat in the soil by leaving the biomass harvested from the field on site for animal use, or supplementing organic matter needs with off-field forages. Grazing harvested forages in this manner, will help to incorporate organic matter, feed and diversify the soil microbiome, build better aggregation and increase soil health and critical functions such as infiltration, nutrient cycling, and weather resilience. Forages should be placed evenly throughout the field, but can be concentrated in areas where particular concerns, such as bare ground, need to be remedied. Decisions of forage placement must take into account areas that would be sensitive to such activity such as protecting surface waters from nutrients or steep slopes from erosion.	acre	1	5	State supplemental guidance may be necessary to recommend feeding rates, duration in paddocks and spacing between bales.	NA	Added new statement in criteria on unrolling bales.
E528R	PLANTS	Plant Productivity and Health, Plant Structure and Composition			X				Management Intensive Rotational Grazing	Management intensive, multi-paddock grazing system where livestock are regularly and systematically moved to fresh forage to optimize quantity and quality of forage growth, improve manure distribution, improve wildlife cover, and improve soil health.	acre	1	5	Implementation Requirements that reduce pasture/paddock size while increasing stock density to maximize forage growth, quantity and quality; improve manure distribution; increase carbon sequestration, improve wildlife cover and protect soil from erosion.	NA	
E533A	WATER	Inefficient Irrigation Water Use	X	X	X				Advanced Pumping Plant Automation	This enhancement consists of installing a control device to a pump station that allows the user to remotely monitor and operate the pump station based on field measured data. Pumping stations may have either a combustible or electric power unit that are compatible with the control device or sensor. These devices/sensors collect field-measured data and provide this data in real time to the landowner to make irrigation decisions and adjustments to the pump operation	No	1	1		NA

E580A	SOIL	Streambank, Shoreline, Water Conveyance Channels	X	X	X	X	X	X	Stream corridor bank stability improvement	Stream corridor bank vegetation components are established to provide additional streambank stability.	acre	20	1		NA	
E580B	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X	X	X	X	Stream corridor bank vegetation improvement	Stream corridor bank vegetation components are established to improve ecosystem functioning and stability.	acre	20	1	List of plants that provide habitat requirements for desirable wildlife and pollinators. WHEG for species of concern.	NA	
E590A	WATER; AIR	Nutrients Transported to Surface Water; Nutrients Transported to Ground Water; Emission of Greenhouse Gases (GHGs)	X	X					Improving nutrient uptake efficiency and reducing risk of nutrient losses	Nutrient management encompasses managing the amount, source, placement, and timing of the application of plant nutrients and soil amendments. Nutrients are currently being applied on the farm based on the 4R nutrient stewardship principles. Enhanced nutrient use efficiency strategies or technologies are utilized to improve nutrient use efficiency and reduce risk of nutrient losses to surface and groundwater and reduce risks to air quality by reducing emissions of greenhouse gases (GHGs).	acre	1	5	List of nitrogen or phosphorous EEF products recommended by state Land Grant University (LGU) and concurred with by NRCS. Documentation of LGU and/or laboratory guidelines for interpretations of the results and appropriate nutrient adjustments based on in-season plant tissue sampling and analysis.	NA	
E590B	WATER	Nutrients Transported to Surface Water; Nutrients Transported to Ground Water	X	X					Reduce risks of nutrient loss to surface water by utilizing precision agriculture technologies	Precision application technology and techniques are utilized to plan and apply nutrients to improve nutrient use efficiency and reduce risk of nutrient losses.	acre	1	5		NA	
E595A	WATER	Pesticides Transported to Surface Water	X	X					Reduce risk of pesticides in surface water by utilizing precision pesticide application techniques	Utilize precision application techniques to reduce risk of pesticides in surface water by reducing total amount of chemical applied and reducing the potential for delivery of chemicals into water bodies.	acre	1	5		NA	

FY 2021 CSP Activity List
Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E595B	WATER, AIR	Pesticides Transported to Surface Water; Emissions of Ozone Precursors Pesticides	X	X	X				Reduce risk of pesticides in water and air by utilizing IPM PAMS techniques	Utilize integrated pest management (IPM) prevent, avoidance, monitoring, and suppression (PAMS) techniques to reduce risk of pesticides in water and air. Reduce the potential for delivery of chemicals into water or ozone precursor emissions.	acre	1	5		NA	
E595D	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X						Increase the size requirement of refuges planted to slow pest resistance to Bt crops	Bacillus thuringiensis (Bt) plant incorporated protectants are plants that have been genetically altered to produce proteins that are harmful to certain insect pests. Widespread implementation of Bt crops has decreased insecticide use and increased crop yields, but it must be used as part of an integrated pest management (IPM) approach to protect the crop from pest species that are not susceptible to the Bt toxin and to manage pest resistance. Crop rotation, scouting and resistance management strategies, such as planting and creating refuges of non-Bt crops, are essential when farming Bt crops. Insects have developed resistance to Bt proteins. To mitigate the development of further resistance, growers are required to plant refuges of non-transgenic crops. These refuges produce numbers of susceptible insects that will help sustain populations of non-resistant insects. The size of Refuge requirement depends on the environment, pest and strain of the crop. Size of refuge is determined by resistance risk. Most Bt corn requires that 20% of the total Bt crop planted be non-Bt. Cotton can require 50% of the crop be planted to non-Bt. A recent study published in the Journal of Integrated Pest Management revealed, compliance has been a challenge. Nearly 40% of growers surveyed did not plant the required refuge (Reisig 2017). They credit non-compliance, in part, to lack of understanding by small-scale farmers about the need for refuges.	acre	1	5		No	
E612A	WATER	Sediment Transported to Surface Water	X	X					Cropland conversion to trees or shrubs for long term improvement of water quality	Cropland conversion to trees and shrubs for long term erosion control and improvement of water quality. Trees and shrubs are established on cropland where annually-seeded cash crops have been grown. Tree and/or shrub species are selected for their efficacy in holding soil, and the planting design is configured to control runoff and trap sediment.	acre	15	1		YES

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E612B	AIR	Emission of Greenhouse Gases (GHGs)	X	X	X	X	X	X	Planting for high carbon sequestration rate	Plant tree species and use stocking levels for higher growth to increase the rate of carbon sequestration (capture). Use species with a longer life span as well as relatively fast growth, and species suitable for durable manufactured products. Increase stocking levels in forests that are not fully stocked. Implement afforestation on appropriate open lands.	acre	15	1	Additional criteria to supplement CPS 612. List of tree species that meet requirements for high rates of carbon sequestration and are suitable for the geographic location.	YES	
E612C	Plants	Plant Productivity and Health; Plant Structure and Composition Terrestrial Habitat for Wildlife and Invertebrates				X	X		Establishing tree/shrub species to restore native plant communities	Establish trees and/or shrubs to restore elements of plant diversity that have been lost through past diseases or improper management. For example, disease-resistant varieties of elm and chestnut can be established to restore the ecological functions of American elm and American chestnut. At the stand level, past forest management may have eliminated certain native tree species. Restoring stand-level diversity and function addresses a wide array of resource concerns and strengthens ongoing management activities. This enhancement improves a forest that is already in good condition by increasing plant diversity, and improving health and vigor through adding plants with resistance to disease, pests, or other local hazards. Additional benefits include contributing to carbon storage, and providing diversity in wildlife habitat and food sources.	acre	15	1	List of native species eliminated or reduced on the site, suitable for restoration.	NA	
E612D	PLANTS	Plant Structure and Composition	X	X	X	X	X	X	Adding food-producing trees and shrubs to existing plantings	Plant food-producing trees and shrubs for wildlife or human consumption within windbreaks, alley cropping, multi-story cropping, silvopasture systems, and/or riparian forest buffers.	acre	15	1	Additional criteria to supplement CPS 612. State list of suitable woody plants for food/culinary use.	NA	
E612F	PLANTS	Plant Structure and Composition				X	X	X	Sugarbush management	Establish or maintain species diversity in a sugarbush to enhance pollinator and wildlife needs. Maintain at least 20% of basal area in species other than sugar maple (Acer saccharum) to provide species diversity. Half of the trees that are not sugar maples (10%) will be mast producing species (hard or soft mass). Use maple tree tapping guidelines that minimize tree damage.	acre	15	1	Additional criteria to supplement CPS 612. State list of suitable mast-producing tree species.	NA	
E612G	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X	X	X	X	X	X	Tree/shrub planting for wildlife food	Tree or shrub planting to enhance habitat for native wildlife. A minimum of five tree or shrub species will be used; they will be species that provide food and/or cover for identified wildlife species.	acre	15	1	Additional criteria to supplement CPS 612. List of trees and shrubs important for wildlife food. WHEG for species of concern.	YES	

FY 2021 CSP Activity List
Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E643C	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates				X	X		Restore glade habitat to benefit threatened and endangered species and state species of concern	Restore Glade natural communities as shown by the Ecological Site Description to conserve biodiversity. Enhancement requires reducing woody canopy cover and applying at least one prescribed fire to treated acres. Restoration of glade communities provide habitat for rare and declining species. Sites that previously or currently support the rare and declining habitat will be targeted for restoration.	acre	5	1	Wildlife Habitat Evaluation Guide (WHEG) to assess habitat condition, both existing and planned score Provide TA for development of prescribed burn plan	NA	
E647A	ANIMALS	Terrestrial Habitat for Wildlife and Invertebrates	X						Manipulate vegetation on fields with captured rainfall for waterfowl & wading bird winter habitat	Harvested and idled agricultural lands, notably those occurring within rice rotations, contain high densities of residual (i.e., waste) grain and natural seeds following harvest. Seed densities in harvested rice fields may rival those documented in intensively managed moist-soil units, especially in the Gulf Coast and Central Valley of California. When flooded to shallow depths during fall and winter, these agricultural fields provide ideal foraging habitat for myriad species of waterfowl and wading birds. In addition, flooded conditions promote establishment of aquatic invertebrate populations, thus providing protein-rich food sources for shorebirds as well as waterfowl and wading birds. In many cases, light manipulation of dense vegetation is needed to improve the accessibility of food resources to waterfowl, wading birds, and shorebirds.	acre	5	1	Wildlife Habitat Evaluation Guide (WHEG) to assess habitat condition, both existing and planned score	NA	
E666A	SOIL, AIR	Organic Matter Depletion; Soil Organism Habitat Loss or Degradation; Aggregate Instability; Compaction; Emission of Greenhouse Gases (GHGs);				X			Maintaining and improving forest soil quality	Adopts guidelines for maintaining and improving soil quality on sites where forest management activities are practiced. These guidelines will increase soil organic matter content, improve nutrient cycling, and increase infiltration and retention of precipitation. Avoiding soil compaction will allow for greater root development and tree growth, limit windthrow, and reduce drought stress. Increasing carbon storage on site will maintain the soil microbial community and provide wildlife benefits.	acre	10	1	Any required state specific additions to CPS 666.	NA	
E666D	PLANT, ANIMAL, WATER	Plant Pest Pressure; Terrestrial Habitat for Wildlife and Invertebrates; Naturally Available Moisture Use; Nutrients Transported to Surface Water; Nutrients Transported to Ground Water;				X			Forest management to enhance understory vegetation	This enhancement provides for management of the understory vegetation in a forested area by mechanical, chemical, and/or manual methods to improve the plant species mix and the health of the residual vegetation. Managing the understory vegetation increases available water to the plants, minimizes runoff and erosion, and improves water quality. An adequately stocked forest provides inputs of leaves, needles, and woody twigs and stems to the forest floor, adding to soil organic matter and contributing to forest soil health. Desirable tree species and understory vegetation, with spacing that allows ground cover to develop, will allow moisture to infiltrate and be stored in the soil, releasing moisture over longer periods of time.	acre	10	1	Any required state specific additions to CPS 666. Guidelines for species and species groups to determine spacing, density, size-class distribution, number of trees, and amount of understory species to be retained.	NA	

FY 2021 CSP Activity List
Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E666E	PLANT	Wildfire Hazard from Biomass Accumulation				X			Reduce height of the forest understory to limit wildfire risk	Forest stand improvement that manages forest structure to reduce the risk of wildfire, and creates conditions that facilitate prescribed burning. The fire risk reduction is accomplished by reducing the height of the woody understory and midstory, creating space between the ground cover and the tree canopy. This enhancement provides for management of the understory vegetation in a forested area, using mechanical, chemical or manual methods to improve the plant species mix and the health of the residual vegetation, and reduce the risk of wildfire. In appropriate stands, the treatment creates conditions that favor prescribed burning. Forest stand improvement (FSI) activities are used to remove trees of undesirable species, form, quality, condition, or growth rate. The quantity and quality of forest for wildlife and/or timber production will be increased by manipulating stand density and structure. These treatments can also reduce wildfire hazards, improve forest health, restore natural plant communities, and achieve or maintain a desired native understory plant community for soil health, wildlife, grazing, and/or browsing.	acre	10	1	Any required state specific additions to CPS 666. Guidelines for species and species groups to determine spacing, density, size-class distribution, number of trees, and amount of understory species to be retained.	NA	
E666F	PLANT, ANIMAL	Plant Productivity and Health; Terrestrial Habitat for Wildlife and Invertebrates				X			Reduce forest stand density to create open stand structure	Reducing forest stand density creates open forest conditions with a low basal area which promotes the health and vigor of the residual trees. The open stand structure allows a significant amount of sunlight to reach the forest floor and stimulates the growth of understory vegetation. Understory vegetation management, along with the wide spacing between trees or clumps of trees, provides visual appeal, lowers the risk of wildfire, and provides habitat for many at-risk and listed wildlife species. The enhancement creates conditions that facilitate a follow-up treatment with prescribed burning.	acre	10	1	Any required state specific additions to CPS 666. Guidelines for species and species groups to determine spacing, density, size-class distribution, number of trees, and amount of understory species to be retained.	NA	
E666G	PLANT, ANIMAL	Wildfire Hazard from Biomass Accumulation; Terrestrial Habitat for Wildlife and Invertebrates				X			Reduce forest density and manage understory along roads to limit wildfire risk and improve habitat	Opening the tree canopy along roads ("daylighting"), and providing space between ground vegetation and tree crowns minimizes the spread of wildfires that often start along roads, and improves wildlife habitat and food sources for many species. Some trees near a forest road are removed through harvesting, cutting, mulching, or another option available at the site, with the objective of creating a partially open forest canopy bordering the road. A semi-open canopy allows more sunlight to reach the forest floor to promote herbaceous understory plants, and reduces maintenance needs by allowing moisture to evaporate from roads. The reduced canopy and herbaceous understory limit woodland fuel buildup and reduce fire intensity.	acre	10	1	Any required state specific additions to CPS 666. Guidelines for species and species groups to determine spacing, density, size-class distribution, number of trees, and amount of understory species to be retained. Nesting season for ground nesting birds.	NA	Reducing approximately 50 % of Trees was removed from guidesheet and reference to Fuel Break (383) criteria was added.
E666H	SOIL, AIR	Emission of Greenhouse Gases (GHGs), Organic Matter Depletion				X	X	X	Increase on-site carbon storage	Use forest management techniques to maintain and increase on-site carbon storage. These include, but are not limited to, applying uneven-aged management, using longer rotations, retaining cavity/den trees, snags, and down woody debris, and protecting or increasing soil organic material.	acre	10	1	Any required state specific additions to CPS 666.	NA	

FY 2021 CSP Activity List
Enhancements

Legend
Green: Updated Existing Enhancements
Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E666I	PLANT, ANIMAL	Plant Productivity and Health; Terrestrial Habitat for Wildlife and Invertebrates				X	X	X	Crop tree management for mast production	Forest stand improvement using crop tree management techniques to increase mast production	acre	10	1	Any required state specific additions to CPS 666.	NA	
E666J	PLANT, ANIMAL	Plant Productivity and Health; Plant Structure and Composition; Terrestrial Habitat for Wildlife and Invertebrates				X	X		Facilitating oak forest regeneration	Facilitate oak regeneration following a forest stand improvement treatment for natural oak regeneration (i.e., a regeneration cut). After a regeneration cut, oaks in the seedling and sapling stages are often out-competed by invasive brush and undesirable tree and shrub species. This enhancement will release seedling and sapling oaks from competing invasive plants and other undesirable species, and thin stump sprouts. A forester will monitor site conditions, treat competition, protect seedlings, and recommend additional follow-up treatments as needed. The enhancement protects investments in oak regeneration by providing for follow-up activities that require the expertise of a professional forester.	acre	10	2	Any required state specific additions to CPS 666.	No	Max years for contracting changed to 2, also added reference to T/S site prep (code 490) in guidesheet.
E666K	PLANT, ANIMAL	Plant Structure and Composition; Terrestrial Habitat for Wildlife and Invertebrates				X	X	X	Creating structural diversity with patch openings	Forest stand improvement that creates patch openings. Size, shape, and arrangement of patches will be based on natural features, and emulate patches that would result from natural disturbance regimes of wind or fire, varying geographically and by forest type, and by tree species desired from natural regeneration. The treatment will create diversity in stand composition and structure, increase pest resistance, and enhance wildlife food availability. Openings may provide regeneration sites and restore natural plant communities, and achieve or maintain a desired understory plant community for wildlife habitat.	acre	10	1	Any required state specific additions to CPS 666. WHEG for forest species. List of invasive species.	NA	
E666L	PLANT, ANIMAL	Plant Structure and Composition, Terrestrial Habitat for Wildlife and Invertebrates				X			Forest Stand Improvement to rehabilitate degraded hardwood stands	Hardwood forestland has been subject to poor logging practices ("high-grading") for decades. Without professional forestry assistance the best species and individual trees are removed, often before maturity ("diameter-limit cutting"), leaving the poorest species and individual trees to regenerate the stand. Reversing this process requires cutting or killing poor quality trees while retaining any desirable species that might still be present. A combination of 3 silvicultural methods are applied: crop tree release, group selection (all trees removed from an area 0.25 to 1.0 acre in size) and small clear-cuts (all trees removed from an area 1-3 acres in size).	acre	10	1	Any required state specific additions to CPS 666.	NA	
E666N	PLANT, ANIMAL	Wildfire Hazard from Biomass Accumulation, Terrestrial Habitat for Wildlife and Invertebrates				X	X		Creating structural diversity in dry Western forests	Restore natural stand structure in dry Western forests by creating openings characteristic of reference ecological site conditions in stands where even thinning treatments have already been applied to reduce wildfire risk. Thinning treatments are effective in reducing fuels, but typically do not restore forest structural diversity to emulate benchmark or reference conditions. Applying this enhancement as a follow-up treatment will create a patchy structure that provides open areas where grasses and forbs can thrive and produce wildlife food and cover. The size, shape, and arrangement of openings will be based on moisture availability and site physiography, to emulate structural conditions that would result from natural disturbance regimes of wind and/or fire.	acre	10	1	Any required state specific additions to CPS 666.	No

Blue: New FY 2021 Enhancements

Code	Resource Concern	Resource Concern Cause	Crop (Annual and Mixed)	Crop (Perennial)	Pasture	Forest	Associated Ag Land	Farmstead	Full Enhancement Name	Enhancement Description	Units	Enhancement Lifespan	Max years enh. can be contracted	State Supplemental information Required ++	Suitable for Land Use Conversion	Changes from 2020 to 2021; Highlighted blocks delineate new changes with red font indicating the change.
E666O	ANIMAL	Terrestrial Habitat for Wildlife and Invertebrates				X	X	X	Snags, den trees, and coarse woody debris for wildlife habitat	Improve wildlife habitat through creation and retention of snags, den trees, forest stand structural diversity, and coarse woody debris on the forest floor, to provide cover/shelter for native wildlife species.	acre	10	1	Any required state specific additions to CPS 666. State Best management Practices for water quality. Guidelines for amount and spacing of snags, dens, and coarse woody debris. WHEG for species of concern.	NA	Added the term "Wolf Trees" description and criteria. Added "Perches" in Documentation and IR section of guidesheet. Also added - Prior to implementation, participant will work with NRCS to identify the desired wildlife species that use snags, den trees, coarse woody debris.
E666P	ANIMAL	Terrestrial Habitat for Wildlife and Invertebrates				X	X	X	Summer roosting habitat for native forest-dwelling bat species	Create new potential roost trees within upland and riparian forests to achieve desired summer habitat for forest-dwelling bat species.	acre	10	1	Any required state specific additions to CPS 666. Minimum criteria to meet the habitat requirements of the bat species of concern while avoiding potentially detrimental disturbances during the maternity period. Guidelines for roost tree species and species groups to determine spacing, density, size-class distribution, and amount of understory species to be retained. WHEG for species of concern.	NA	
E666R	ANIMAL	Terrestrial Habitat for Wildlife and Invertebrates				X	X	X	Forest songbird habitat maintenance	Adopts guidelines and methods developed by the Forest Bird Initiative of the Vermont Audubon Society, to preserve habitat features following a forest stand improvement treatment designed to create habitat for a suite of forest-dwelling neotropical migratory songbirds. It includes developing or updating a forest management plan, inspecting and tending forest habitat, and monitoring bird populations. It protects investments in habitat creation by providing for follow-up activities that require the expertise of a professional forester or biologist. This enhancement is appropriate for states in the Atlantic Flyway and the Upper Midwest.	acre	10	5	Any required state specific additions to CPS 666.	NA

Bundles - Not suitable for Voluntary Land Use Conversion

Green: Updated Existing Bundle

Blue: New Bundle for FY2021

Bundle Code	Eligible Land Uses						Bundle Name	Bundle Description (Bundles are NOT suitable for Voluntary Land Use Conversion)	Units	Bundle Lifespan	Max years bundle can be contracted	Information States need to Develop Prior to Signup
	Crop (Annual and Perennial)	Pasture	Forest	Associated Ag Land	Farmstead							
B000CPL10	X					YEAR 1 Irrigated Cropland (MRBI/Ogallala)	Addresses water quality degradation, insufficient water, soil erosion, and inefficient energy resource concerns. Adopt E590A, E449D, E449A, and E340A. This bundle will be applied one time and the enhancements maintained for their lifespan.	acre	1	1	See specific component enhancements.	
B000CPL11	X					YEAR 2+ Irrigated Cropland (MRBI/Ogallala)	Addresses water quality degradation, insufficient water, and soil erosion resource concerns. Adopt E590A, E449C, and E340A. This bundle may be applied multiple times.	acre	1	4	See specific component enhancements.	
B000CPL12	X					Non-Irrigated Precision Ag (MRBI)	Addresses water quality degradation, soil quality, and soil erosion resource concerns. Adopt E590B, E595A, E340A, and E329D or E345D. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL13	X					Non-Irrigated Cropland (MRBI)	Addresses water quality degradation, soil quality, and soil erosion resource concerns. Adopt E590A, E595B, and E340A. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL14	X					YEAR 1 Irrigated Precision Ag Cropland (MRBI)	Addresses water quality degradation, insufficient water, soil erosion, and inefficient energy resource concerns. Adopt E590B, E449D, E449A, and E340A. This bundle will be applied one time and the enhancements maintained for their lifespan.	acre	1	1	See specific component enhancements.	
B000CPL15	X					YEAR 2+ Irrigated Precision Ag Cropland (MRBI)	Addresses water quality degradation, insufficient water, and soil erosion resource concerns. Adopt E590B, E449C, and E340A. This bundle may be applied multiple times.	acre	1	4	See specific component enhancements.	
B000CPL16	X					Non-Irrigated Cropland with Water Bodies (MRBI)	Addresses water quality degradation, soil erosion, and soil quality resource concerns. Adopt E590A, E595B, E340A, E329D or E345D, and E390A or E393A. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL17	X					Non-Irrigated Cropland with Water Bodies Riparian Forest Buffer (MRBI)	Addresses water quality degradation, soil erosion, and soil quality resource concerns. Adopt E590A, E595B, E340A, E329D or E345D, and E391A. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL18	X					Crop Bundle #18 - Precision Ag	Addresses water quality degradation, fish and wildlife inadequate habitat, air quality impairment, and either soil erosion or soil quality degradation resource concerns. Adopt E595A, E590B, E328D, E329A or E345A, and E340A or E340C. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL19	X					Crop Bundle #19 - Soil Health Precision Ag	Addresses water quality degradation, soil quality degradation, fish and wildlife inadequate habitat, and insufficient water resource concerns. Adopt E595A, E590B, E328D, E327A or E420A, and E329C or E345C. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.

Bundles - Not suitable for Voluntary Land Use Conversion

Green: Updated Existing Bundle

Blue: New Bundle for FY2021

Bundle Code	Eligible Land Uses						Bundle Name	Bundle Description (Bundles are NOT suitable for Voluntary Land Use Conversion)	Units	Bundle Lifespan	Max years bundle can be contracted	Information States need to Develop Prior to Signup
	Crop (Annual and Perennial)	Pasture	Forest	Associated Ag Land	Farmstead							
B000CPL20	X					Crop Bundle #20 - Soil Health Assessment	Addresses water quality degradation, soil quality degradation, fish and wildlife inadequate habitat, and insufficient water resource concerns. Adopt E595B, E590A, E328F, E327A or E420A, and E329C or E345C. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000CPL22	X					Crop Bundle #22 - Erosion Bundle (Organic)	Addresses soil quality degradation, water quality degradation, soil erosion, and fish and wildlife inadequate habitat resource concerns. Adopt E328E, E345D, E595B, E590A, E340A, and E327A or E420A. This bundle may be applied multiple times.	acre	1	5	See specific component enhancements.	
B000FST1				X		Forest Bundle#1	Addresses forest management on sites that are not adapted to natural fire disturbances. Address soil quality degradation, degraded plant condition, fish/wildlife inadequate habitat, and insufficient water. Adopt E666A, E666I, E666O, E612G, and E666D.	acre	15	1	See specific component enhancements.	
B000GRZ2			X			Grazing Bundle 2 - Range and Pasture	The participant will implement site specific strategies applied to range or pasture through the following enhancements: E472A, E382A, and E580A. This bundle will be applied one time and the enhancements maintained for their lifespan in order to address water quality degradation, fish and wildlife inadequate habitat, and soil erosion resource concerns.	acre	20	1	See specific component enhancements.	
B000GRZ3			X			Grazing Bundle 3 - Range and Pasture	The participant will implement site specific strategies applied to range or pasture through the following enhancements: E472A, E390B, and E580A. This bundle will be applied one time and the enhancements maintained for their lifespan in order to address water quality degradation, fish and wildlife inadequate habitat, and soil erosion resource concerns.	acre	20	1	See specific component enhancements.	
B000GRZ4			X			Grazing Bundle 4 - Range and Pasture	The participant will implement site specific strategies applied to range or pasture through the following enhancements: E472A, E391C, and E580A. This bundle will be applied one time and the enhancements maintained for their lifespan in order to address water quality degradation, fish and wildlife inadequate habitat, and soil erosion resource concerns.	acre	15	1	See specific component enhancements.
