

What's New for 2022?

A lot has happened since our final report last spring. Below is a summary of new developments.

Snow Survey - You Tube Video

An overview of the Snow Program in Nevada including information about the SNOTEL network, streamflow forecasting and services available.

Palisade Tahoe Name Change

The names of the SNOTEL and snow course located at the ski resort formally known as Squaw Valley have been changed. New names are:

- [Palisades Tahoe SNOTEL](#)
- [Palisades Tahoe #2 Snow Course](#)

Snow Survey Fact Sheet

Provides similar information as the snow survey video but in a written format.

Spratt Ck SNOTEL after rebuild

Fire Season Summary

A few Carson and Lake Tahoe basin snow sites were damaged. [Spratt Creek SNOTEL](#) (Carson Basin) suffered damage from the Tamarack fire but was rebuilt in October. It is now fully operational. [Freel Bench](#) and [Truckee Upper](#) snow courses in the Tahoe basin were inside Caldor perimeter. Both courses will be measured this winter. No other sites suffered damage.

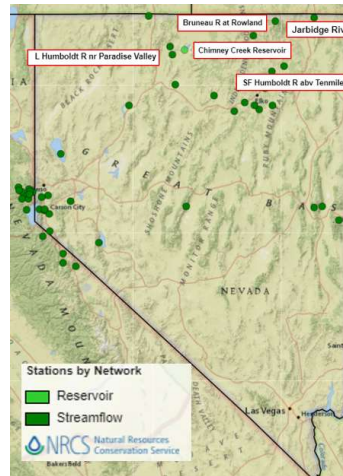

A big thanks to fire personnel who defended SNOTEL sites from damage and for hazard tree removal at Spratt Creek.

1991-2020 Normals Dashboard

The NRCS updated its 30-year normals period from 1981-2010 to 1991-2020. Normals are used in a variety of products to represent data as a percent of normal. Changing normals impacts percentages and requires users to recalibrate themselves. The dashboard provides tools to assess impacts in Nevada.
