

## **Environmental Quality Incentives Program**

The Environmental Quality Incentives Program (EQIP) is a voluntary, conservation program administered by NRCS that can provide financial and technical assistance to install conservation practices that address natural resource concerns. The purpose of EQIP is to promote agricultural production, forest management, and environmental quality as compatible goals; to optimize environmental benefits; and to help farmers and ranchers meet Federal, State, Tribal, and local environmental regulations.

## **EQIP Application Sign-up and Cut-off Dates**

NRCS accepts EQIP applications year-round, but establishes cutoff dates to make funding selections for eligible, screened, and ranked applications.

To be ready for EQIP funding consideration, interested applicants will need to: (1) Develop a conservation plan, (2) Submit an application, (3) Meet program eligibility requirements, and (4) Approve their 'EQIP schedule of operations'.

The time needed to complete a conservation plan and process eligibility can vary, from a few weeks to more than a month, depending on the complexity of the farming operation.

## **Develop a Conservation Plan**

A conservation plan includes all practices, regardless of the program's financial assistance, that a producer or landowner has agreed to adopt for the agricultural operation and/or associated agricultural lands. Interested applicants are encouraged to request conservation planning and technical assistance from a local NRCS field office to help with the development of a conservation plan.

## **Submitting an Application**

Interested applicants may apply for EQIP by completing and submitting the application, Form NRCS-CPA-1200, Conservation Program Application, to the NRCS field office in person, by phone, email, or fax in the county which you own land or where you have non-industrial private forest land.

## **Program Eligibility Requirements**

In order to be considered eligible for EQIP the applicant must have a vested interest in non-industrial private forest land and meet other program eligibility requirements.

## **'EQIP schedule of operations'**

The basis for an application is the 'EQIP schedule of operations' and is derived from the applicant's conservation plan. The EQIP 'schedule of operations' identifies the conservation practices to be implemented, timing of the implementation, practice location, and payment rates.

## **EQIP Screening, Ranking and Funding**

EQIP funding decisions are based on an application evaluation process that includes screening tools and ranking criteria. Screening tools are worksheets used to prioritize an application based on factors such as: a completed conservation plan; readiness to implement practices; history of contract compliance; and resource priorities addressed in the 'EQIP schedule of operations'. Ranking criteria considers the anticipated benefit of a conservation system, or practice, in the 'EQIP schedule of operations' to a natural resource concern.

### About the Tribal Forestland EQIP Fund Pool

The purpose of the Tribal Forestland EQIP Fund Pool is to provide technical and financial assistance opportunities to federally and non-federally recognized Native American Indian Tribes to promote healthy and productive forestlands, reduce soil erosion, enhance fish and wildlife habitat, improve water quality, and reduce wildfire risks.

Applications for the Tribal Forestland EQIP Fund Pool will be screened and ranked using factors that measure the projected environmental benefits towards tribal resource priorities.

Tribes often have different conservation priorities than other producers and tribal culturally based priorities such as the management of traditional Native American food and fiber plants are not priorities for mainstream producers. There are 109 Federally Recognized American Indian Tribes in California; and, at least 69 Non-Federally Recognized Tribes in California petitioning for federal recognition (BIA).

The Federally recognized tribes have jurisdiction over 635,739 acres of Tribal Trust Land in California. There are 17,602 acres of Public Domain Allotments representing the land controlled by non-federally recognized tribes. The acreage of fee land controlled by federally recognized tribes, non-federally recognized tribes, and Native American Indian individuals is not available.

Interested Tribes and Native American Indian individual landowners and/or operators of land managed for forest-related products on non-industrial forestland in California may be eligible for Tribal Forestland EQIP Fund Pool.

### Land Uses for the EQIP Fund Pool

Only applications that address resource concerns on at least one land use type listed below will be considered for financial assistance from this EQIP Fund Pool. The descriptions below are the general NRCS land use definitions - applications should fit within, but do not need to exactly match, these descriptions.

- **Forest:** Land on which the primary vegetation is tree cover (climax, natural or introduced plant community) and use is primarily for production of wood products or non-timber forest products.
- **Associated Agricultural Lands:** Land associated with farms and ranches that are not purposefully managed for food, forage, or fiber and are typically associated with nearby production or conservation lands. This could include incidental areas, odd areas, ditches and watercourses, riparian areas, field edges, seasonal and permanent wetlands, and other similar areas.
- **Grazed:** Where grazing animals impact how land is managed.
- **Wildlife:** Where the applicant is actively managing for wildlife.

### Resource Concerns for the EQIP Fund Pool

Only applications for agricultural operations that address at least one resource concern listed below will be considered for financial assistance through this EQIP Fund Pool. The descriptions below are general NRCS natural resource definitions, applications should fit within, but do not need to exactly match, these descriptions.

- ❖ **SOIL EROSION** – Erosion removes topsoil, reduces levels of soil organic matter, and contributes to the breakdown of soil structure.
  - **Sheet and Rill:** Sheet and rill erosion is the detachment and transportation of soil particles caused by rainfall runoff/splash and/or irrigation events. Symptoms of soil erosion by water include: small rills and channels on the soil surface, soil deposited at the base of slopes, sediment in streams, lakes, and reservoirs, and pedestals of soil supporting pebbles and plant material.
  - **Classic Gullies:** Classic gullies are forms of erosion created by the concentrated flow of water. Classic gully erosion generally occurs in well-defined drainage ways and generally is not obliterated by tillage. Untreated classic gullies may enlarge progressively by head cutting and/or lateral widening.
  
- ❖ **WATER QUALITY DEGRADATION** – Water quality degradation impacts the beneficial use of the receiving waters.
  - **Excessive Sediment in Surface Water:** Off-site transport of sediment to surface water can impact water quality and aquatic habitat. Not only does sediment carry nutrients and pesticides that can negatively impact water quality, but the physical characteristics of sediment can clog stream channels, silt in reservoirs, cover fish spawning grounds, and reduce downstream water quality.
  - **Elevated Water Temperature:** Water temperature has important ecological consequences and potential negative impacts for human use. As water temperature rises, there is a corresponding decrease in the availability of oxygen, carbon dioxide, and other gases important to aquatic life. Warm water also has the potential to increase the presence of dissolved toxic substances that may restrict the suitability of water for human use.
  
- ❖ **DEGRADED PLANT CONDITION** – Plant condition degradation can result in stress, disease, insect damage and result in changes to the structure and composition of plant communities.
  - **Undesirable Plant Productivity and Health:** Plants must be adapted to the site and provided with appropriate amounts of nutrients, water, and sunshine, and protected from unchecked animal, weed, insect, and disease pests. Plants established in the wrong climate or soil may be under stress and may never thrive, no matter how much fertilizer or water supplied. Natural events, such as drought, or mismanagement can cause plant stress. Plants under stress are more susceptible to disease and insect damage.
  - **Inadequate Structure and Composition:** Plant communities, such as - wetland habitat, unique ecosystems or targeted plant communities, have insufficient diversity, density, distribution patterns, and three-dimensional structure necessary to achieve ecological functions and/or management objectives.
  - **Excessive Plant Pest Pressure:** The term “pest” can be any animal, plant, insect, bacteria, or virus that results in plant damage or competes for space, nutrients, or water (e.g., weeds). Heat, drought, wind, sun, and cold create stress on plants that make them more susceptible to pests.
  - **Wildfire Hazard, Excess Biomass Accumulation:** Accumulated plant residue (biomass) creates wildfire hazards that pose risks to human safety, structures, plants, animals, and air resources. While fire is an important and often beneficial part of the natural ecosystem, uncontrolled or “wild” fire poses a threat to life, health, and property.

- ❖ **INADEQUATE HABITAT FOR FISH AND WILDLIFE** – Quantity, quality or connectivity of food, water, cover/shelter, habitat continuity and/or space is inadequate to meet requirements of identified fish, wildlife or invertebrate species.
  - **Habitat Degradation:** Conserving existing habitat and restoring habitat improves the odds that fish and wildlife communities will thrive. The availability and arrangement of food, water, cover, shelter, habitat continuity and space determine the number of organisms that a region can support, also known as carrying capacity. Increasing carrying capacity is critical to attaining long-term population stability.

### Eligible NRCS Conservation Activity Plans

Only applications for NRCS conservation activity plans listed in the table below are eligible for financial assistance through this EQIP Fund Pool. A Conservation Activity Plan (CAP) can be developed for an applicant to identify conservation practices needed to address a specific natural resource need.

Information about CAP services from Technical Service Providers (TSP), including how to find a certified TSP in your State, can be found on the NRCS national TSP website:

<http://www.nrcs.usda.gov/wps/portal/nrcs/detail/national/programs/technical/tsp/?cid=stelprdb1042981>

**Table 1. Eligible Conservation Activity Plans**

Practice Code	Conservation Activity Plan Name	Practice Units	Lifespan (Years)
106	Forest Management Plan - Written	no	1
110	Grazing Management Plan - Written	no	1
112	Prescribed Burning Plan - Written	no	1
142	Fish and Wildlife Habitat Plan - Written	no	1

### Eligible NRCS Conservation Practices

All conservation practices planned for financial assistance must be included in the 'EQIP schedule of operations' and address a resource concern identified in this EQIP Fund Pool. NRCS conservation practices eligible for financial assistance through this EQIP Fund Pool are listed in the below table.

For more information about NRCS conservation practices visit the following website link for NRCS conservation practice standards:

[http://www.nrcs.usda.gov/wps/portal/nrcs/detail/national/technical/?cid=NRCSDEV11\\_001020](http://www.nrcs.usda.gov/wps/portal/nrcs/detail/national/technical/?cid=NRCSDEV11_001020)

**Table 2. Eligible Conservation Practices**

Practice Code	Conservation Practice Name	Practice Units	Lifespan (Years)
314	Brush Management	ac	10
315	Herbaceous Weed Control	ac	5
326	Clearing and Snagging	ft	5
327	Conservation Cover	ac	5
338	Prescribed Burning	ac	1
342	Critical Area Planting	ac	10
362	Diversion	ft	10

Practice Code	Conservation Practice Name	Practice Units	Lifespan (Years)
378	Pond	no	20
379	Multi-Story Cropping	ac	10
380	Windbreak/Shelterbelt Establishment	ft	15
381	Silvopasture Establishment	ac	15
382	Fence	ft	20
383	Fuel Break	ac	10
384	Woody Residue Treatment	ac	10
390	Riparian Herbaceous Cover	ac	5
391	Riparian Forest Buffer	ac	15
393	Filter Strip	ac	10
394	Firebreak	ft	5
395	Stream Habitat Improvement and Management	ac	5
396	Aquatic Organism Passage	mi	5
410	Grade Stabilization Structure	no	15
422	Hedgerow Planting	ft	15
436	Irrigation Reservoir	ac-ft	15
441	Irrigation System, Microirrigation	ac	15
460	Land Clearing	ac	10
468	Lined Waterway or Outlet	ft	15
472	Access Control	ac	10
484	Mulching	ac	1
490	Tree/Shrub Site Preparation	ac	1
500	Obstruction Removal	ac	10
516	Livestock Pipeline	ft	20
520	Pond Sealing or Lining, Compacted Soil	no	15
521A	Pond Sealing or Lining, Flexible Membrane	no	20
528	Prescribed Grazing	ac	1
533	Pumping Plant	no	15
548	Grazing Land Mechanical Treatment	ac	1
550	Range Planting	ac	5
560	Access Road	ft	10
561	Heavy Use Protection	ac	10
570	Stormwater Runoff Control	no	15
572	Spoil Spreading	ac	1
574	Spring Development	no	20
575	Trails and Walkways	ft	10
578	Stream Crossing	no	10
580	Streambank and Shoreline Protection	ft	20
584	Channel Bed Stabilization	ft	10
587	Structure for Water Control	no	20
606	Subsurface Drain	ft	20
612	Tree/Shrub Establishment	ac	15

Practice Code	Conservation Practice Name	Practice Units	Lifespan (Years)
614	Watering Facility	no	20
620	Underground Outlet	ft	20
630	Vertical Drain	no	10
636	Water Harvesting Catchment	no	20
638	Water and Sediment Control Basin	no	10
647	Early Successional Habitat Development/Management	ac	1
649	Structures for Wildlife	no	5
650	Windbreak/Shelterbelt Renovation	ft	15
654	Road/Trail/Landing Closure and Treatment	ft	10
655	Forest Trails and Landings	ft	5
657	Wetland Restoration	ac	15
658	Wetland Creation	ac	15
659	Wetland Enhancement	ac	15
660	Tree/Shrub Pruning	ac	10
666	Forest Stand Improvement	ac	10
740	Pond Sealing and Lining, Soil Cement	no	20

**NRCS Field Office Contact Information**

For more information about EQIP, how to apply and program eligibility, interested applicants should contact a NRCS field office in the county which you own land or where you have non-industrial private forest land.
