Animal Enhancement Activity—KS-ANM65
Monitoring nutritional status of ruminant livestock using the NUTBAL system

Kansas Criteria for National Animal Enhancement Activity—ANM65

2. Choose an option offered by the lab which best fits the needs of the grazing operation.
3. Identify grazing operation design on the ranch or farm (forage growing period, grazing period, vegetation to be monitored, livestock used to harvest forage) to determine sampling period, sampling schedule, and numbers of samples to be taken (minimum of 6 samples and analysis will be required each year.)
4. Decisions made based upon analysis reports shall be documented in written form and provided to the Natural Resources Conservation Service (NRCS) office in the participant’s respective county.
5. Reports shall indicate when needed actions were taken and provided to the NRCS at the end of the grazing and monitoring period or schedule.
