

SUNNYSIDE -- DISTRICT OF COLUMBIA REPRESENTATIVE SOIL

Sunnyside Soil Profile

Surface layer: dark brown loam

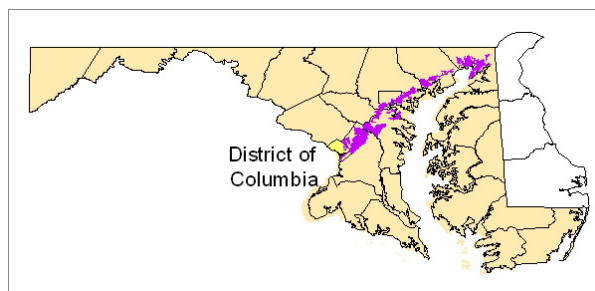

Subsoil - upper: yellowish red clay loam

Subsoil - lower: reddish brown sandy clay loam

The Sunnyside series consists of very deep, well drained, moderately permeable soils formed in unconsolidated deposits of very old, dominantly sandy sediments. They are on uplands of the Coastal Plain, with slopes that range from 0 to 40 percent. Sunnyside is categorized as a Prime Farmland Soil, which means it is one of the most productive soils for agriculture and forestry, in addition to being one of the best suited soils to construction and recreational development.

These soils are mapped on nearly 700 acres in the District of Columbia, and other areas in the adjacent state of Maryland.

Average annual precipitation is 44 inches. Average annual air temperature is 55 degrees F.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). *USDA is an equal opportunity provider and employer.*
