

PENISTAJA -- NEW MEXICO STATE SOIL

Penistaja Soil Profile

Surface layer: brown fine sandy loam

Subsoil: strong brown sandy clay loam

Substratum: reddish yellow sandy loam

Penistaja soils are extensive in New Mexico, where they have an extent of more than 1 million acres. They are very productive rangeland soils and are excellent for livestock grazing, wildlife habitat, and recreation. The Penistaja series was named after a small farming and stock-raising community in northwest New Mexico. "Penistaja" is a Navajo name meaning "forced to sit." Penistaja soils occur in a beautiful Southwest setting of sandstone mesas, snow-capped mountains, and desert grasslands.

Penistaja soils formed in mixed alluvium and eolian material derived from sandstone and shale. The mean annual precipitation is about 12 inches, and the mean annual soil temperature is about 51 degrees F.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). *USDA is an equal opportunity provider and employer.*
