There is currently a glitch in Toolkit 7.1 where you cannot select pancaked polygons in order to attribute them (selection dialog box does not pop up). This will be fixed in the next update. In the meantime, below is the workaround for this problem.

1. Click on the attribute tool

2. Select the layer Practices (polygons)

3. Right click on Practices (polygons) in the Table of contents then select Open Attribute Table
4. Click the gray box on the far left of the a row that has a <Null> planned amount in the table to select the polygon in the attribute table *this initiates the attribute tool functionality*

5. Click the x in the upper right to close the attribute Table and ensure you know which field you are working on

6. Complete the attribution
7. Click Apply, then OK

8. If you receive the “already scheduled” message, that is OK. This is not an error, just a notification to make sure you want to create another instance of the practice.

9. Repeat for each overlapping /pancaked practice.
