

Conservation Activity Plan

Feed Management • April 2014

Feed Management

A feed management conservation activity plan is a site-specific strategy to help a landowner manage the quantity and quality of available nutrients required by livestock and poultry while improving feed efficiency.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as:

- Evaluation of existing and planned feeds and feedstuff
- Assessment of farm nutrient balance
- Analyses of diets and manure
- Assessment of client objectives

Conservation practices recommended by such a plan can include:

- Nutrient management
