**Documentation of Water Rights  
for USDA - Natural Resource Conservation Service  
Assisted Projects**

Natural Resource Conservation Service (NRCS) technical assistance for planning, designing, constructing, operating and maintaining conservation practices is subject to applicable Federal, State of Idaho, or local laws and regulations. Landowners are responsible for having or acquiring water rights, obtaining permits and obtaining approval of construction plans as needed from Federal, State, or local agencies as appropriate.

The following information must be provided to your local NRCS Field Office prior to their providing assistance on your irrigation project. The top block listed below needs to be filled in by the landowner when the land being irrigated has a specific water right from IDWR. The lower block needs to be filled in and signed by a canal company/district official whenever the affected acres are located within the boundaries of a water district/company. The landowner will need to sign in both cases. Both blocks may need to be filled in if irrigation water comes from multiple sources.

<u>Individual Water Right from Well, Stream Diversion, Wastewater, etc.</u>
