

## PART 541 – DRAFTING AND DRAWINGS

### ND541.0 General

- D. Construction drawings in North Dakota will include the following items:
- i. A standard cover sheet showing location, legal description, and table of contents.
  - ii. List each conservation practice standard involved in the project, with associated engineering job class approval authority.
  - iii. Provide a summary table of materials and quantities required for construction of the project. Information should be of a sufficient detail to allow for reasonably accurate bids from potential contractors.
  - iv. Provide sufficient information so that a capable contractor can construct the job with minimal assistance. Many contractors have survey capabilities and/or GPS controls on their heavy equipment, so basic stakeout information should be included in the construction drawings as applicable to the project.
  - v. Indicate by name and date the individual(s) who designed, drafted, checked, and approved each sheet of the construction drawings. Checking shall be in accordance with ND511.5.
