*Refer to the Worksheet Instructions for guidance on completing a Suitability and Feasibility Determination.

**CP30, Marginal Pastureland Wetland Buffer Practice Purpose:** Remove nutrients, sediment, organic matter, pesticides, and other pollutants from surface runoff and subsurface flow by deposition, absorption, plant uptake, denitrification, and other processes, and thereby reduce pollution and protect surface water and subsurface water quality while enhancing the ecosystem of the wetland. This practice will enhance and/or restore hydrology and plant communities associated with existing or degraded wetland complexes. The goal is to enhance water quality, reduce nutrient and pollutant levels, and improve wildlife habitat.

**Element #1 Site Conditions/Program Requirements**
Identify if offer area meets CP30 site condition criteria by checking all of the following:

- Offer area is immediately adjacent and parallel to a qualifying water body for CP30.
  - Wetland; permanently flooded
  - Wetland; intermittently exposed
  - Wetland; semi permanently flooded
  - Wetland; seasonally flooded
- Offer area is not less than 20 feet in width.
- Offer area does not exceed a maximum average of 120 feet in width. (When the minimum design specification for water quality exceeds 120 feet, the minimum design is the maximum average width that may be enrolled. NRCS must document in writing the need for a minimum design in excess of 120 feet.)
- Current vegetation is grasses, shrubs and/or forbs.

Current Cover Type in Offer Area: ______________________________________________________

Current Land Use in Offer Area: ______________________________________________________

- YES – All Site Conditions Referenced Above are Met
- NO – Site Conditions Not Met

**Element #2 Practice Needs**
Is there a resource concern within the offer area that is targeted by CP30 per the practice purpose?
*If existing cover is solving the resource concern(s) in the practice purpose, then the determination must be that the CP is not needed. Reference Worksheet Instructions for guidance on CRP contract re-enrollment.

Indicate which NRCS resource concern cause(s) are present within the offer area (minimum of 1 to meet practice need):

- Water Quality Degradation: Excess nutrients in surface and ground waters
- Water Quality Degradation: Pesticides transported to surface and ground waters
- Water Quality Degradation: Excess pathogens and chemicals from manure, bio-solids or compost applications
- Water Quality Degradation: Excessive salts in surface and ground waters
- Water Quality Degradation: Petroleum, heavy metals and other pollutants transported to receiving waters
- Water Quality Degradation: Excessive sediment in surface waters
- Inadequate Habitat for Fish and Wildlife: Habitat degradation

- YES – Practice is Needed
- NO – Practice Not Needed
Element #3 Practice Feasibility
Will the implementation of CP30 solve or address the resource concern(s) listed in the practice purpose?
*Provide documentation to FSA if minimum design width exceeds 120 feet to address water quality per NRCS practice standard.

☑ YES – Practice is Feasible ☐ NO – Practice is Not Feasible

Element #4 Practice Suitability
Are the offered acres suitable for installation of the NRCS conservation practices needed to apply CP30?
*Offer area must be suitable for the enhancement of the current grass, shrub and forb plant community to provide water quality improvement and wildlife habitat benefits.

☑ YES – Practice is Suitable ☐ NO – Practice is Not Suitable

Suitability and Feasibility Determination Findings:

☐ The location and size of the offered acres as shown on the CRP-2C, digital imagery/map meet all four elements of the Suitability and Feasibility determination.

☐ The offer DOES NOT meet the Suitability and Feasibility requirements. Check the element(s) that were not met.

☐ Site Conditions/Program Requirements
☐ Practice Needs
☐ Practice Feasibility
☐ Practice Suitability

☐ Modification of the offer (either location, size or practice) would result in meeting all four S&F determination elements. See documentation.

Documentation:
 Provide information supporting the determination of each element in this section.
 Conservation Planner has attached or provided to FSA (check all that applies):

☐ Notes on form NRCS CPA-6 ☐ Map
☐ Photo’s ☐ Electronic File with GPS Points or GIS Shapefile
