Farmers in four sub-watersheds within the West Branch of the Floyd River in Sioux County have the opportunity to receive higher payment rates on conservation practices and systems that avoid, control and trap nutrient runoff; improve wildlife habitat; and maintain agricultural productivity.

It’s part of the Mississippi River Basin Healthy Watersheds Initiative (MRBI). The goal of MRBI is to reduce nutrient loading in the Mississippi River Basin, which contributes to both local water quality problems and the hypoxic zone in the Gulf of Mexico.

The primary long-term goals of the West Branch of the Floyd River Quality Initiative Project align with Iowa’s Nutrient Reduction Strategy. They include: reducing in-stream nonpoint source nitrogen, reducing sediment delivery and in-stream phosphorus, monitoring water quality trends in the watershed, and engaging with all landowners and operators in the project area.

The watershed’s high application rate of livestock manure, combined with erosive soils and a well-connected drainage network have led to excessive nutrient loading and sedimentation.

MRBI will be offered for multiple years. To enroll, applicants must meet the minimum eligibility requirements of the Environmental Quality Incentives Program (EQIP). Primary conservation practices and payment rates are listed on the back page.

For more information about this project and MRBI, contact our local USDA Service Center:

Sioux County (Orange City): 712-737-2253

More information is available on Iowa’s MRBI webpage at http://bit.ly/IowaMRBI.

Farmers in the following West Branch of the Floyd River sub-watersheds may be eligible for MRBI funding:

- Village of Maurice
- Unnamed Tributary
- Orange City Slough
- Village of Middleburg

Stop by your NRCS Field Office if you farm in this area!
