Putting Partners in the ‘Driver’s Seat’
The Regional Conservation Partnership Program (RCPP) is a partner-driven, locally-led approach to conservation. USDA’s Natural Resource Conservation Service (NRCS) funds projects that address a variety of critical resource concerns across the nation. The RCPP program brings together partners and producers to find innovative ways to tackle issues like protecting soil health, mitigating water quality/quantity concerns, and protecting wildlife habitat.

Addressing Local Resource Challenges
Partners develop projects that deliver solutions to natural resource challenges with technical and financial help from NRCS. RCPP empowers local organizations and communities to pitch their own projects. Each year, NRCS receives hundreds of proposals, and of those, the agency selects the best for funding. To date, NRCS has funded 375 high-impact partner projects that cover all 50 states and Puerto Rico. NRCS works side-by-side with conservation partners and agricultural producers to conserve natural resources, leading to cleaner and more abundant water, healthier soil, enhanced wildlife habitat and many other benefits.
Targeting Priority Landscapes
Critical Conservation Areas are landscapes of national importance, and RCPP enables stakeholders to address common natural resource goals at the regional level.

Types of Projects
Up to $300 million is available for new RCPP projects each year. This funding is equally split between two funding pools, the Critical Conservation Areas and State/Multi-State projects.

Projects Near You
RCPP gives local organizations opportunities to design and deliver solutions that benefit natural resources where they live and work. See how many projects are in your area.
