The U.S. Department of Agriculture’s Natural Resources Conservation Service (NRCS) administers the Emergency Watershed Protection (EWP) Program, which responds to emergencies created by natural disasters. It is not necessary for a national emergency to be declared for an area to be eligible for assistance.

The EWP Program is a recovery effort aimed at relieving imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences. All projects undertaken, with the exception of the purchase of floodplain easements, must have a project sponsor. NRCS may bear up to 75 percent of the construction cost of emergency measures (90 percent within limited-resource areas as identified by the U.S. Census data). The remaining costs must come from local sources and can be in the form of cash or in-kind services. Funding for the program is provided through congressional appropriations.

**Type of Work Authorized**

EWP is designed for installation of recovery measures to safeguard lives and property as a result of a natural disaster. Threats that the EWP Program addresses are termed watershed impairments. These include, but are not limited to:

- debris-clogged stream channels,
- undermined and unstable streambanks,
- jeopardized water control structures and public infrastructures,

EWP work is not limited to any one set of prescribed measures. NRCS completes a Damage Survey Report which provides a case-by-case investigation of the work necessary to repair or protect a site. NRCS will only provide funding for work that is necessary to reduce applicable threats. Levee repair on large rivers such as the Arkansas River are outside of the scope of EWP.

Should sponsors want to increase the level of protection, the sponsor will be responsible for paying 100 percent of the costs of the upgrade and additional work.

The program can also include purchasing floodplain easements. These easements restore, protect, maintain, and enhance the functions and values of the floodplain, including associated wetlands and riparian areas. They also conserve natural values including fish and wildlife habitat, water quality, flood water retention and ground water recharge, as well as safeguard lives and property from floods, drought, and the results of erosion.
Criteria for Assistance

All EWP work must reduce threat to life and property; be economically, environmentally, and socially defensible; and be sound from a technical standpoint.

Eligibility

Public and private landowners are eligible for assistance, but must be represented by a project sponsor. Sponsors include legal subdivisions of the State, such as a city, county, general improvement district, conservation district, or any Native American tribe or tribal organization as defined in Section 4 of the Self-Determination and Education Assistance Act.

Sponsor’s Obligations

Sponsors are responsible for:
• providing land rights to do repair work,
• securing the necessary permits,
• furnishing the local cost-share, and
• performing any necessary operation and maintenance.

How Do I Get Assistance?

• Public and private landowners - if your land has suffered severe damage that may qualify for the EWP Program, you should contact your local authorities (city or county government, flood and water control district, or local conservation district) and request assistance.
• Project sponsors - contact the NRCS office at your local USDA Service Center or call (501) 301-3100.

For more information, contact your local USDA Service Center or: www.ar.nrcs.usda.gov/programs/ewp.

Flooding 2008 - Nashville, Ark.

Flood waters in April 2008 eroded the bank along a stream near the sewage lagoon for Nashville, Ark.

A streambank stabilization project funded through EWP and completed in April 2009 protects the lagoon.
